# **GURU KASHI UNIVERSITY**

# Bachelor of Technology in Mechanical Engineering

# Session: 2023-24

# **Department of Mechanical Engineering**

# GRADUATE OUTCOME OF THE PROGRAMME

The program focuses to develop an ability to apply appropriate knowledge in Mechanical Engineering to identify, formulate, analyze, and solve complex engineering problems in order to develop sustainable computing solutions in broader economic, societal and environmental contexts.

# **PROGRAMME LEARNING OUTCOMES**

After completing the programme, the learner will be able to:

- 1. Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- 2. Identify, formulate and analysis complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- 5. Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 6. Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 7. Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 8. Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

# **Program Structure**

	Semester: I						
Course Code	Course Title	Type of Course	L	т	Р	No. of Credits	
BME101	Basic Electrical Engineering	Core	3	0	0	3	
BME110	Engineering Physics	Core	3	1	0	4	
BME111	Engineering Mathematics-I	Core	3	1	0	4	
BME104	Engineering Graphics & Drawing	Core	1	0	4	3	
BME112	Engineering Physics Lab	Skill Based	0	0	4	2

will

select

any**3**courses(fromanydepartment),basedonindividualinterestandprojectlist provided by the dean academic office.

# Mandatory Visits/ Workshop/Expert Lectures

- 1. It is mandatory to arrange one industrial visit every semester for the students of each branch.
- 2. It is mandatory to conduct a One-week workshop during the winter break after fifth semester on professional/ industry/ entrepreneurial orientation.
- 3. It is mandatory to organize at least one expert lecture per semester for each branch by inviting resource persons from domain specific industry.

# **Evaluation Criteria for Theory Courses**

# A. Continuous Assessment: [30 Marks]

CA-I Surprise Test (Two best out of three) - (10 Marks)

CA-II Assignment(s) (10 Marks)

CA-III Term paper/Quiz/Presentation (5 Marks)

- B. Attendance (5 marks)
- C. Mid Semester Test: [30 Marks]
- D. End Semester Exams: [40 Marks]

**Evaluation Criteria for Practical Courses** 

**Performance of each practical**-(10 Marks)

**Report-**(5 Marks)

Practical Viva -

# SEMESTER- I

# **Course Title: BASIC ELECTRICAL ENGINEERING Course Code: BME101**

# **Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Understand the DC and AC electrical circuit elements with RLC.
- 2. Analysis of simple circuits with dc excitation. Superposition, The venin and Norton Theorems.
- 3. Use Single Phase AC Circuits and representation of alternating quantities and determining the power in these circuits.
- 4. Classify the different types of Electrical machines.

#### **Course Content** UNIT I

# **DC Circuits**

Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems. Time-domain analysis of first-order RL and RC circuits.

#### UNIT II

#### **AC Circuits**

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three- phase balanced circuits, voltage and current relations in star and delta connections.

#### Transformers

Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Auto-transformer and three-phase transformer connections.

#### UNIT III

#### **Electrical Machines**

Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Loss components and efficiency, starting and speed control of induction motor. Single-phase induction motor. Construction, working, torquespeed characteristic and speed control of separately excited dc motor. Construction and working of synchronous generators.

#### UNIT IV

#### **Power Converters**

DC-DC buck and boost converters, duty ratio control. Single-phase and three-phase voltage source inverters; sinusoidal modulation.

### **Electrical Installations**

Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

#### Credits L Т Ρ 3 0 0 3

#### COURSE TITLE: ENGINEERING PHYSICS **COURSE CODE: BME110**

#### **Total Hours: 60**

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Apply knowledge of electricity and magnetism to explain natural physical processes and related technological advances.
- 2. Use the knowledge regarding calculus along with physical principles to effectively solve problems encountered in everyday life, further study in science, and in the professional world.
- 3. Design experiments and acquires data in order to explore physical principles, effectively communicate results, and evaluate related scientific studies.
- 4. Assess the contributions of physics to our evolving understanding of global change and sustainability while placing the development of physics in its historical and cultural context.

# **Course Content** UNIT I

Electrostatics: Calculation of electric field and electrostatic potential for a charge distribution; Divergence and curl of electrostatic field; Laplace's and Poisson's equations for electrostatic potential, Boundary conditions of electric field and electrostatic potential; method of images. Electrostatic field and potential of a dipole. Bound charges due to electric polarization; Electric displacement; boundary conditions on displacement; solving simple electrostatics problems in presence of dielectrics – Point charge at the center of a dielectric sphere, charge in front of a dielectric slab, dielectric slab and dielectric sphere in uniform electric field.

# UNIT II

Magneto statics: Bio-Savart law, Divergence and curl of static magnetic field; vector potential and calculating it for a given magnetic field using Stokes' theorem; vector potential and its solution for given current densities. Properties of magnetic materials: magnetic susceptibility and ferromagnetic, paramagnetic and diamagnetic materials.

Time Varying Field and Maxwell's Equation: Laws of Electromagnetic Induction, Self and Mutual induction, Concept of Displacement Current, Difference between Conduction Current and Displacement Current, Eddy Current, Maxwell's Equations, Derivation of Maxwell's Equations, Propagation of Electromagnetic Waves in Free Space, Solution of propagation of Plane Electromagnetic Wave in free space.

# **UNIT III**

Semiconductors: Intrinsic and extrinsic semiconductors, Carrier generation and recombination, Carrier transport: diffusion and drift, p-n junction, Semiconductor materials of interest for optoelectronic devices.

# **15 Hours**

**15 Hours** 

L	Т	Р	Credits
3	1	0	4

**Modern Physics:** Particle properties of wave: Planck's hypothesis, Qualitative discussion of Photoelectric effect and Compton Effect. Wave properties of particle: De Broglie wave as mater waves, Heisenberg's uncertainty principle and its application. Quantum Mechanics: Interpretation of wave function, Schrödinger equation (time dependent and time independent), particle in a box,

# UNIT IV

# 15 Hours

**Wave Optics:** Interference due to division of wavefront, Young's double slit expt., Principle of Superposition, Interference from parallel thin films, Newton rings, Michelson interferometer. Diffraction: Fresnel Diffraction, Diffraction at a straight edge, Fraunhoffer diffraction due to N slits, Diffraction grating, dispersive and resolving power of Grating. Polarization: production of plane polarized light by different methods, Brewster and Malus Laws. Double refraction, Quarter & half wave plate, Nicol prism, specific rotation, Laurent's half shade polarimeter.

**Laser:** Introduction, principle of Laser, stimulated and spontaneous emission, Einstein's Coefficients, He-Ne Laser, Ruby Laser, Application of Lasers.

# **Transaction Modes**

# 17

# **COURSE TITLE: ENGINEERING MATHEMATICS-I COURSE CODE: BME111**

# **Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Apply differential and integral calculus to notions of curvature and to improper integrals. Apart from some other applications they will have a basic understanding of Beta and Gamma functions.
- 2. Classify of Rolle's Theorem that is fundamental to application of analysis to Engineering problems.
- 3. Illustrate the Tool of power series and Fourier series for learning advanced Engineering Mathematics.
- 4. Use of functions of several variables that is essential in most branches of engineering and tools of matrices and linear algebra in a comprehensive manner.

#### **Course Content** UNIT I

### a. Calculus:

Evolutes and involutes; Evaluation of definite and improper integrals; Beta and Gamma functions and their properties; Applications of definite integrals to evaluate surface areas and volumes of revolutions.

Rolle's theorem, Mean value theorems, Taylor's and Maclaurin theorems with remainders; Indeterminate forms and L'Hospital's rule; Maxima and minima.

#### **b.** Advanced Calculus

Differentiation: Limit, continuity and partial derivatives, directional derivatives, total derivative; Tangent plane and normal line; Maxima, minima and saddle points; Method of Lagrange multipliers; Gradient, curl and divergence.

Integration: Multiple Integration: double and triple integrals (Cartesian and polar), change of order of integration in double integrals, Change of variables (Cartesian to polar), Applications: areas and volumes by (double integration) Center of mass and Gravity (constant and variable

densities). Theorems of Green, Gauss and Stokes, orthogonal curvilinear coordinates, Simple applications involving cubes, sphere and rectangular parallelepipeds.

# UNIT II

#### Trigonometry

Hyperbolic and circular functions, logarithms of complex number resolving real and imaginary parts of a complex quantity, De Moivre's Theorem.

Theory of equations: Relation between roots and coefficients, reciprocal Equations, transformation of equations and diminishing the roots.

#### **UNIT III**

#### Sequences and series

Convergence of sequence and series, tests for convergence; Power series, Taylor's series, series for exponential, trigonometric and logarithm functions; Fourier series: Half range sine and cosine series, Parseval's theorem. UNIT IV

Algebra Vector Space, linear dependence of vectors, basis, dimension; Linear transformations (maps), range and kernel of a linear map, rank and nullity, Inverse of a linear transformation, ranknullity theorem, composition of linear maps, Matrix associated with a linear map.

Eigenvalues, eigenvectors, symmetric, skew-symmetric, and orthogonal Matrices, eigenbases. Diagonalization; Inner product spaces, Gram-Schmidt orthogonalization.

# **COURSE TITLE: ENGINEERING GRAPHICS & DRAWING COURSE CODE: BME104**

L	Т	Ρ	Credits
1	0	4	3

### **Total Hours-45**

**Learning Outcomes:** After completion of this course, the learner will be able to:

1. Understand about engineering drawing applications and its importance in society.

- 2. Learn about the visual aspects of engineering design.
- 3. Discuss the engineering graphics standards.
- 4. Classify the concept of solid modeling techniques.

# **Course Content**

# UNIT I

- 1. Introduction to Engineering Drawing covering, Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Conic sections including the Rectangular Hyperbola (General method only); Cycloid, Epicycloid, Hypocycloid and Involute; Scales - Plain, Diagonal and Vernier Scales.
- 2. Orthographic Projections covering, Principles of Orthographic Projections-Conventions -Projections of Points and lines inclined to both planes; Projections of planes inclined Planes -Auxiliary Planes.

# **UNIT II**

- 1. Projections of Regular Solids covering, those inclined to both the Planes- Auxiliary Views; Draw simple annotation, dimensioning and scale. Floor plans that include: windows, doors, and fixtures such as WC, bath, sink, shower, etc.
- 2. Sections and Sectional Views of Right Angular Solids covering, Prism, Cylinder, Pyramid, Cone - Auxiliary Views; Development of surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone; Draw the sectional orthographic views of geometrical solids, objects from industry and dwellings (foundation to slab only)

# **UNIT III**

- 14 Hours 1. Isometric Projections covering, Principles of Isometric projection - Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa, Conventions;
- 2. Overview of Computer Graphics covering, listing the computer technologies that impact on graphical communication, Demonstrating knowledge of the theory of CAD software [such as: The Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom as used in CAD, Select and erase objects.; Isometric Views of lines, Planes, Simple and compound Solids];
- 3. Customization & CAD Drawing consisting of set up of the drawing page and the printer, including scale settings, Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles;

# UNIT IV

# **10 Hours**

1. Annotations, layering & other functions covering applying dimensions to objects, applying annotations to drawings; Setting up and use of Layers, layers to create drawings, Create, edit and use customized layers; Changing line lengths through modifying existing lines

# 9 Hours

(extend/lengthen); Printing documents to paper using the print command; orthographic projection techniques; Drawing sectional views of composite right regular geometric solids and project the true shape of the sectioned surface; Drawing annotation, Computer-aided design (CAD) software modeling of parts and assemblies. Parametric and non-parametric solid, surface and wireframe models. Part editing and two-dimensional documentation of models. Planar projection theory including sketching of perspective, isometric, multi view, auxiliary, and section views. Spatial visualization exercises. Dimensioning guidelines, tolerance techniques; dimensioning and scale multi views of dwelling;

2. Demonstration of a simple team design project that illustrates Geometry and topology of engineered components: creation of engineering models and their presentation in standard 2D blueprint form and as 3D wire-frame and shaded solids; meshed topologies for engineering analysis and tool-path generation for component manufacture; geometric dimensioning and tolerance; Use of solid-modeling software for creating associative models at the component and assembly levels; floor plans that include: windows, doors, and fixtures such as WC, bath, sink, shower, etc. Applying color coding according to building drawing practice; Drawing sectional elevation showing foundation to ceiling; Introduction to Building Information Modeling (BIM).

#### **Transaction Mode**

# Course Title: ENGINEERING PHYSICS LAB Course Code: BME112

L	Т	Ρ	Credits
0	0	4	2

### **Total Hours-30**

**Learning Outcomes** On successful completion of this course, the students would be able to:

- 1. Illustrate the working p-n junction diode.
- 2. Analyse and solve various engineering problems.
- 3. Understand principle, concept, working and application of new technology and comparison of results with theoretical calculations.
- 4. Design new instruments with practical knowledge.

# **Course Content**

# List of experiments

- 1. To study the V-I characteristics of P-N junction.
- 2. To verify the logic gates.
- 3. To calculate the acceleration due to gravity "g" using simple pendulum.
- 4. To find the moment of inertia of flywheel.
- 5. To measure the diameter of a small spherical/cylindrical body using Vernier calipers/screw gauge.
- 6. To draw V-I characteristics of Zener diode and determine reverse breakdown voltage.
- 7. To study the controls and obtain a wave using Cathode Ray Oscilloscope.
- 8. To find the resolving power of the prism.
- 9. To determine the angle of the given prism.
- 10. To determine the refractive index of the material of a prism.
- 11. To understand the phenomenon Photoelectric effect as a whole.
- 12. To draw kinetic energy of photoelectrons as a function of frequency of incident radiation.
- 13. To determine the Planck's constant from kinetic energy versus frequency graph.
- 14. To plot a graph connecting photocurrent and applied potential.
- 15. To determine the stopping potential from the photocurrent versus applied potential graph.

Note : Students will perform any 7-8 experiments from the syllabus.

# Course Title: BASIC ELECTRICAL ENGINEERING LAB Course Code: BME106

L	Т	Ρ	Credits
0	0	4	2
	-		

**Total Hours-30** 

Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Analysis of Resistive Circuits and Solution of resistive circuits with independent sources.
- 2. Understand the Two Terminal Element Relationships for inductors and capacitors and analysis of magnetic circuits.
- 3. Analysis of Single-Phase AC Circuits, the representation of alternating quantities and determining the power in these circuits.
- 4. Compare different types of Electrical machines and classify different electrical measuring equipment's and understanding their principles

# **Course Content**

# List of Experiments:

- 1. Basic safety precautions. Introduction and use of measuring instruments voltmeter, ammeter, multi-meter, oscilloscope. Real-life resistors, capacitors and inductors.
- 2. Measuring the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits impedance calculation and verification. Observation of phase differences between current and voltage. Resonance in R-L-C circuits.
- 3. Transformers: Observation of the no-load current waveform on an oscilloscope (nonsinusoidal wave-shape due to B-H curve nonlinearity should be shown along with a discussion about harmonics). Loading of a transformer: measurement of primary and secondary voltages and currents, and power.
- 4. Three-phase transformers: Star and Delta connections. Voltage and Current relationships (line-line voltage, phase-to-neutral voltage, line and phase currents). Phase-shifts between the primary and secondary side. Cumulative three-phase power in balanced three-phase circuits.
- 5. Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winging slip ring arrangement) and single-phase induction machine.
- 6. Torque Speed Characteristic of separately excited dc motor.
- 7. Synchronous speed of two and four-pole, three-phase induction motors. Direction reversal by change of phase-sequence of connections. Torque-Slip Characteristic of an induction motor. Generator operation of an induction machine driven at super- synchronous speed.
- 8. Synchronous Machine operating as a generator: stand-alone operation with a load. Control of voltage through field excitation.
- 9. Demonstration of (a) dc-dc converters (b) dc-ac converters PWM waveform (c) the use of dcac converter for speed control of an induction motor and (d) Components of LT switchgear.

**Course Title: Fundamental of Computer and Information** Technology

**Course Code: BME113** 

Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Understand the concept of input and output devices of Computers
- 2. Study to use the Internet safely, legally, and responsibly.
- 3. discuss an operating system and its working, and solve common problems related to operating systems
- 4. Learn basic word processing, Spreadsheet and Presentation Graphics Software skills

#### **Course Content** UNIT I

8 Hours Computer Hardware / Software- Definition, History, Generation, Characteristics, Types & Applications, Overview of a computer system:

Hardware/Software-Definition of Hardware, Input Unit: Keyboard, Mouse, Scanner etc, CPU: Arithmetic Logic Unit (ALU), Control Unit (CU), Memory Unit (MU), Output Unit: Monitor, Printer etc, Storage Devices: Primary &Auxulary Memory (Floppy Disk, Hard Disk, Compact Disk, DVD, Flash Disk etc), Others: Network Card, Modem, Sound Card etc.

Software: Definition & types of Software, Programming Language, Liveware, Firmware and Cache Memory

# UNIT II

Setting & Protection of Computer Room and Computer- Concept of Computer related threats (virus, worms, Trojan, phishing etc) remedies and protection

File Management basics: Physical structure of disk

# UNIT III

Concept of E-mail / Internet / Extranet, World Wide Web (WWW)- Familiarity with internet browsers (eg.Inernet Explorer, Firefox, Opera, Safari, Google Chrome etc.), Introduction of IP address, suBMEt mask and default gateway, Introduction to Network Media, topology and protocol, Setting up Microsoft Network, Dial-Up Networking

# UNIT IV

Number System: Introduction to binary, octal, decimal and hexadecimal number system Introduction to ASCII and Unicode standards

# **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning

# **Suggested Readings**

- Rajaraman, V., & Adabala, N. (2014). Fundamentals of computers. PHI Learning Pvt. • Ltd...

7 Hours

7 Hours

# **Course Title: Constitution of India Course Code: BME114**

Learning Outcomes:	After completion of this course, the learner will be able to:	

- 1. Knowledge and legal literacy and thereby to take up competitive examinations
- 2. Understand state and central policies, fundamental duties, Electoral Process, and special provisions
- 3. Analyze powers and functions of Municipalities, Panchayats and Co-operative Societies, and
- 4. Classify the engineering ethics and responsibilities of Engineer and an awareness about basic human rights in India

# **Course Content**

# Unit I

Introduction to the Constitution of India, The Making of the Constitution and Salient features of the Constitution.

Preamble to the Indian Constitution Fundamental Rights & its limitations.

# Unit II

Directive Principles of State Policy & Relevance of Directive Principles State Policy Fundamental Duties.

Union Executives - President, Prime Minister Parliament Supreme Court of India.

State Executives - Governor Chief Minister, State Legislature High Court of State.

Electoral Process in India, Amendment Procedures, 42<sup>nd</sup>, 44th, 74th, 76th, 86th &91st Amendments.

# Unit III

Special Provision for SC & ST Special Provision for Women, Children & Backward Classes Emergency Provisions. Human Rights -Meaning and Definitions, Legislation Specific Themes in Human Rights- Working of National Human Rights Commission in India Powers and functions of Municipalities, Panchyats and Co - Operative Societies.

# **Unit IV**

Scope & Aims of Engineering Ethics, Responsibility of Engineers Impediments to Responsibility.

Risks, Safety and liability of Engineers, Honesty, Integrity & Reliability in Engineering. **Transaction Mode** 

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

# SEMESTER-II

### Course Title: ENGINEERING CHEMISTRY Course Code: BME201

#### Learning Outcomes:

On successful completion of this course, the students would be able to:

- 1. Demonstrate Schrodinger equation, Particle in a box solution and their applications
- 2. Conjugated molecules and Nanoparticles,
- 3. Evaluate band structure of solids and the role of doping on band structures.
- 4. Distinguish the ranges of Vibrational and rotational spectroscopy of diatomic molecules,
- 5. Applications, Nuclear magnetic resonance and magnetic resonance imaging
- 5. Rationalize periodic properties such as ionization potential, electro-negativity, Oxidation states and electro-negativity.
- 6. List the Thermodynamic functions: energy, entropy and free energy and also Estimations of entropy and free energies.

# Course Content

# UNIT I

#### Atomic and molecular structure

Schrodinger equation, Particle in a box solution and their applications for conjugated molecules and Nanoparticles, Forms of the hydrogen atom wave functions and the plots of these functions to explore their spatial variations, Molecular orbitals of diatomic molecules and plots of the multicenter orbitals. Equations for atomic and molecular orbitals. Energy level diagrams of diatomic. Pi-molecular orbitals of butadiene and benzene and aromaticity. Crystal field theory and the energy level diagrams for transition metal ions and their magnetic properties. Band structure of solids and the role of doping on band structures.

#### UNIT II

#### 1. Spectroscopic techniques and applications

Principles of spectroscopy and selection rules, Electronic spectroscopy, Fluorescence and its applications in medicine, Vibrational and rotational spectroscopy of diatomic molecules, Applications, Nuclear magnetic resonance and magnetic resonance imaging, surface characterization techniques, Diffraction and scattering.

#### 2. Intermolecular forces and potential energy surfaces

Ionic, Dipolar and Vander Waals interactions, Equations of state of real gases and critical phenomena. Potential energy surfaces of H3, H2F and HCN and trajectories on these surfaces.

#### UNIT III

#### 1. Use of free energy in chemical equilibria

Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and emf. Cell potentials, the Nernst equation and applications. Acid base, oxidation reduction and solubility equilibria, Water chemistry, Corrosion,Use of free energy considerations in metallurgy through Ellingham diagrams.

#### 2. Periodic properties

Effective nuclear charge, penetration of orbitals, variations of s, p, d and f orbital energies of atoms in the periodic table, electronic configurations, atomic and ionic sizes, ionization energies,

# L T P Credits 3 0 0 3

# **Total Hours-45**

# **10Hours**

**15Hours** 

electron affinity and electronegativity, polarizability, oxidation states, coordination numbers and geometries, hard soft acids and bases, molecular geometries

### UNIT IV

#### **10Hours**

### 1. Stereochemistry

Representations of 3 dimensional structures, structural isomers and stereoisomers, configurations and symmetry and chirality, enantiomers, diastereomers, optical activity, absolute configurations and conformational analysis. Isomerism in transitional metal compounds

#### 2. Organic reactions and synthesis of a drug molecule

Introduction to reactions involving substitution, addition, elimination, oxidation, reduction, cyclization and ring openings. Synthesis of a commonly used drug molecule.

### Transaction Mode

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

#### 28

### Course Title: ENGINEERING MATHEMATICS –II Course Code: BME214

# **Learning Outcomes**: After completion of this course, the learner will be able to:

- 1. Demonstrate the methods of forming and solving Ordinary differential equations and solve linear differential equations with constant and variable coefficients
- 2. Explain the concept of differential equation and classifies the differential equations with respect to their order and linearity.
- 3. Solve first-order ordinary and exact differential equations and converts separable and homogeneous equations to exact differential equations by integrating factors.
- 4. Apply the method of undetermined coefficients to solve the non-homogeneous linear differential equations with constant coefficients.

### **Course Content**

#### UNIT-I

**First order ordinary differential equations:** Exact, linear and Bernoulli's equations, Euler's equations, Equations not of first degree: equations solvable for p, equations solvable for y, equations solvable for x and Clairaut's type.

### Ordinary differential equations of higher orders:

Second order linear differential equations with variable coefficients, method of variation of parameters, Cauchy-Euler equation; Power series solutions; Legendre polynomials, Bessel functions of the first kind and their properties.

#### UNIT-II

# **Complex Variable – Differentiation**

Differentiation, Cauchy-Riemann equations, analytic functions, harmonic functions, finding harmonic conjugate; elementary analytic functions (exponential, trigonometric, logarithm) and their properties; Conformal mappings, Mobius transformations and their properties.

# UNIT-III

# **Complex Variable – Integration**

Contour integrals, Cauchy-Goursat theorem (without proof), Cauchy Integral formula (without proof), Liouville's theorem and Maximum-Modulus theorem (without proof); Taylor's series, zeros of analytic functions, singularities, Laurent's series; Residues, Cauchy Residue theorem (without proof), Evaluation of definite integral involving sine and cosine, Evaluation of certain improper integrals using the Bromwich contour.

#### UNIT-IV

# **Transform Calculus**

Laplace Transform, Properties of Laplace Transform, Laplace transform of periodic functions. Finding inverse Laplace transform by different methods, convolution theorem. Evaluation of integrals by Laplace transform, solving ODEs and PDEs by Laplace Transform method. Fourier transforms.

#### **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

Total Hours-45

Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Design the algorithms to write programs.
- 2. Illustrate arrays, pointers and structures to formulate algorithms and programs
- 3. Apply programming to solve simple numerical method problems, namely rot finding of function, differentiation of function and simple integration
- 4. Implement conditional branching, iteration and recursion.

# **Course Content**

# UNIT I

- 1. Introduction to Programming
- 2. Introduction to components of a computer system (disks, memory, processor, where a program is stored and executed, operating system, compilers etc.)
- 3. Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flowchart/Pseudocode with examples.
- 4. From algorithms to programs; source code, variables (with data types) variables and memory
- 5. Locations, Syntax and Logical Errors in compilation, object and executable code

# UNIT II

- 1. Arithmetic expressions and precedence
- 2. Conditional Branching and Loops
- 3. Writing and evaluation of conditionals and consequent branching
- 4. Iteration and loops
- 5. Arrays: Arrays (1-D, 2-D), Character arrays and Strings

# UNIT III

1. Basic Algorithms

Searching, Basic Sorting Algorithms (Bubble, Insertion and Selection), Finding roots of Equations, notion of order of complexity through example programs (no formal definition required)

2. Function

Functions (including using built in libraries), Parameter passing in functions, call by value, Passing arrays to functions: idea of call by reference.

3. Recursion

Recursion, as a different way of solving problems. Example programs, such as Finding Factorial, Fibonacci series, Ackerman function etc. Quick sort or Merge sort.

UNIT IV

1. Structure

Structures, Defining structures and Array of Structures

2. Pointers

Idea of pointers, Defining pointers, Use of Pointers in self-referential structures, notion of linked list (no implementation)

File handling (only if time is available, otherwise should be done as part of the lab)

# **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

# 8Hours

15Hours

**15Hours**

- E. Balaguruswamy (2005) Programming in ANSI C, Tata McGraw-Hill

# **Course Title: COMMUNICATION SKILLS Course Code: BME204**

# **Learning Outcomes**

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Develop vocabulary and improve the accuracy in Grammar.
- 2. Apply the concepts of accurate English while writing and become equally ease at using good vocabulary and language skills.
- 3. Develop and Expand writing skills through Controlled and guided activities.
- 4. Compose articles and compositions in English.

#### **Course Content** UNIT I

# **Vocabulary Building**

The concept of Word Formation, Root words from foreign languages and their use in English, Acquaintance with prefixes and suffixes from foreign languages in English to form derivatives. Synonyms, antonyms, and standard abbreviations.

# UNIT II

# **Basic Writing Skills**

Sentence Structures, Use of phrases and clauses in sentences, Importance of proper punctuation, Creating coherence, Organizing principles of paragraphs in documents, Techniques for writing precisely

# UNIT III

# **Identifying Common Errors in Writing**

Subject-verb agreement, Noun-pronoun agreement, Misplaced modifiers, Articles, Prepositions, Redundancies, Clichés

# UNIT IV

#### 1. Nature and Style of sensible Writing)

Describing, Defining, Classifying, Providing examples or evidence, Writing introduction and conclusion

2. Writing Practices): Comprehension, Précis Writing, Essay Writing

# **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

# **Suggested Readings**

#### **Total Hours-45**

**Learning Outcomes:** After completion of this course, the learner will be able to:

1. Apply the various manufacturing methods in different fields of engineering.

- 2. Use the different fabrication techniques
- 3. Learn about the practices in manufacturing of simple components using different materials.
- 4. Understand the advanced and latest manufacturing techniques being used in engineering industry

# **Course Content**

# UNIT I

- 1. Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods
- 2. CNC machining, Additive manufacturing

# UNIT II

- 1. Fitting operations & power tools
- 2. Electrical & Electronics
- 3. Carpentry

### UNIT III

- 1. Plastic moulding, glass cutting
- 2. Metal casting

# UNIT IV

Welding (arc welding & gas welding), brazing [More hours can be given to Welding for Civil Engineering students as they may have to deal with Steel structures fabrication and erection; 3D Printing is an evolving manufacturing technology and merits some lectures and hands-on training. (1 hour)

# **Workshop Practice:**

- 1. Machine shop 10 hours
- 2. Fitting shop 8 hours
- 3. Carpentry 6 hours
- 4. Electrical & Electronics 8 hours
- 5. Welding shop 8 hours (Arc welding 4 hours) + gas welding 4 hours))
- 6. Casting 8 hours
- 7. Smithy 6 hours
- 8. Plastic moulding& Glass Cutting -6 hours

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

#### **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

### Course Title: ENGINEERING CHEMISTRY LAB Course Code: BME206

L	Т	Ρ	Credits
0	0	2	1

# **Total Hours-15**

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Evaluate the estimate rate constants of reactions from concentration of reactants/products as a function of time.
- 2. Measure molecular/system properties such as surface tension, viscosity, conductance of solutions, redox potentials, chloride content of water, etc.
  - **3.** Apply the theoretical concepts for result analysis and interpret data obtained from experimentation.
- **4.** Identify the compound using a combination of qualitative test and analytical methods **Course Content**

# List of Experiments:

- 1. Determination of surface tension and viscosity
- 2. Thin layer chromatography
- 3. Ion exchange column for removal of hardness of water
- 4. Determination of chloride content of water
- 5. Colligative properties using freezing point depression
- 6. Determination of the rate constant of a reaction
- 7. Determination of cell constant and conductance of solutions
- 8. Potentiometry determination of redox potentials and emfs
- 9. Synthesis of a polymer/drug
- 10. Saponification/acid value of an oil
- 11. Chemical analysis of a salt
- 12. Lattice structures and packing of spheres
- 13. Models of potential energy surfaces
- 14. Chemical oscillations- Iodine clock reaction
- 15. Determination of the partition coefficient of a substance between two immiscible liquids
- 16. Adsorption of acetic acid by charcoal
- 17.Use of the capillary viscosimeters to the demonstrate of the isoelectric point as the pH of minimum viscosity for gelatin sols and/or coagulation of the white part of egg.

# Course Title: PROGRAMMING FOR PROBLEM SOLVING LAB Course Code: BME207

L	Т	Ρ	Credits
0	0	2	1

#### **Total Hours-15**

Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Create read and write to and from simple text files.
- 2. Identify and correct logical errors encountered at run time
- 3. Apply programming to solve simple numerical method problems, namely rot finding of function, differentiation of function and simple integration.
- 4. Represent data in arrays, strings and structures and manipulate them through a program

### **Course Content**

#### List of Experiments:

**Tutorial 1:** Problem solving using computers **Lab1:** Familiarization with programming Environment

**Tutorial 2:** Variable types and type conversions **Lab 2:** Simple computational problems using arithmetic expressions

**Tutorial 3:** Branching and logical expressions **Lab 3:** Problems involving if-then-else structures

**Tutorial 4:** Loops, while and for loops **Lab 4:** Iterative problems e.g., sum of series

**Tutorial 5:** 1D Arrays: searching, sorting **Lab 5:** 1D Array manipulation

**Tutorial 6:** 2D arrays and Strings, memory structure **Lab 6:** Matrix problems, String operations

**Tutorial 7:** Functions, call by value **Lab 7:** Simple functions

**Tutorial 8 &9**: Numerical methods (Root finding, numerical differentiation, numerical integration) **Lab 8 and 9:** Numerical methods problems

**Tutorial 10:** Recursion, structure of recursive calls **Lab 10:** Recursive functions

**Tutorial 11:** Pointers, structures and dynamic memory allocation **Lab 11:** Pointers and structures

**Tutorial 12:** File handling **Lab 12:** File operations

- Byron Gottfried, Schaum's (1995), Outline of Programming with C, McGraw-Hill
- E. Balaguruswamy (2005) Programming in ANSI C, Tata McGraw-Hill.

### Course Title: COMMUNICATION SKILLS LAB Course Code: BME208

L	Т	Ρ	Credits
0	0	2	1

### **Total Hours-15**

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Illustrate the importance of pronunciation and apply the same day to day conversation.
- 2. Apply verbal and non-verbal communication techniques in the Professional Environment.
- 3. Develop coherence, cohesion and competence in Oral discourse.
- 4. Evaluate the interview process confidently.

### **Course Content**

### Oral Communication

(This unit involves interactive practice sessions in Language Lab)

- Listening Comprehension
- Pronunciation, Intonation, Stress and Rhythm
- Common Everyday Situations: Conversations and Dialogues
- Communication at Workplace
- Interviews
- Formal Presentations

### Course Title: Entrepreneurship Development Course Code: BME209

L	Т	Р	Credits			
1	0	0	1			
Total Hours: 15						

**10 Hours** 

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Assess the commercial viability of new technologies, business opportunities and existin companies
- 2. Plan, organize, and execute a project or new venture with the goal of bringing new products and service to the market
- 3. Carry out scientific research in the field of entrepreneurship
- 4. Improved your interpersonal and collaborative skills

### **Course Content**

### UNIT I

**Introduction to Generic Skills:** Importance of Generic Skill Development (GSD), Global and Local Scenario of GSD, Life Long Learning (LLL) and associated importance of GSD.

**Managing Self:** Knowing Self for Self Development- Self-concept, personality, traits, multiple intelligence such as language intelligence, numerical intelligence, psychological intelligence etc., Managing Self – Physical- Personal grooming, Health, Hygiene, Time Management, Managing Self – Intellectual development -Information Search: Sources of information, Reading: Purpose of reading, different styles of reading, techniques of systematic reading, Note Taking: Importance of note taking, techniques of note taking, Writing: Writing a rough draft, review and final draft. Managing Self – Psychological, Stress, Emotions, Anxiety-concepts and significance, Techniques to manage the above.

**Managing in Team:** Team - definition, hierarchy, team dynamics, Team related skillssympathy, empathy, co-operation, concern, lead and negotiate, work well with people from culturally diverse background, Communication in group - conversation and listening skills.

### UNIT III

**Task Management:** Task Initiation, Task Planning, Task execution, Task close out, Exercises/case studies on task planning towards development of skills for task management

**Problem Solving:** Prerequisites of problem solving- meaningful learning, ability to apply knowledge in problem solving, Different approaches for problem solving. Steps followed in problem solving. Exercises/case studies on problem solving.

### UNIT IV

**Entrepreneurship:** Introduction , Concept/Meaning and its need, Competencies/qualities of an entrepreneur, Entrepreneurial Support System e.g., District Industry Centres (DICs), Commercial Banks, State Financial Corporations, Small Industries Service Institute (SISIs), Small Industries Development Bank of India (SIDBI), National Bank of Agriculture and Rural Development (NABARD), National Small Industries Corporation (NSIC) and other relevant institutions/organizations at State/National level. Market Survey and Opportunity Identification (Business Planning)-How to start a small scale industry, Procedures for registration of small-scale industry,

### 5 Hours

## 10 Hours

### 39

List of items reserved for exclusive manufacture in small-scale industry, Assessment of demand and supply in potential areas of growth, Understanding business opportunity, Considerations in product selection, Data collection for setting up small ventures.

Project Report Preparation- Preliminary Project Report, Techno-Economic Feasibility Report, Exercises regarding "Project Report Writing" for small projects. **Transaction Mode**

### Course Title: NUMERICAL APTITUDE & REASONING ABILITY Course Code: BME210

L	Т	Р	Cr.
1	0	0	1

**Total Hours-15** 

Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Understand the basic concepts of quantitative ability and logical reasoning Skills
- 2. Learn the basic concepts of Acquire satisfactory competency in use of reasoning
- 3. Solve campus placements aptitude papers covering Quantitative Ability, Logical Reasoning
- 4. Create the ability to appear in exams like CAT, CMAT, GATE, GRE, GATE, UPSC, GPSC etc.

### Course Content UNIT I

### 1. Quantitative Ability (Basic Mathematics)

- 1.1. Number Systems
- 1.2. LCM and HCF
- 1.3. Decimal Fractions
- 1.4. Simplification
- 1.5. Square Roots and Cube Roots
- 1.6. Average
- 1.7. Problems on Ages
- 1.8. Surds & Indices
- 1.9. Percentages
- 1.10 Problems on Numbers

### UNIT II

- 2. Quantitative Ability (Applied & Engineering Mathematics)
- 2.1. Logarithm
- 2.2. Permutation and Combinations
- 2.3 Probability
- 2.4 Profit and Loss
- 2.5 Simple and Compound Interest
- 2.6. Time, Speed and Distance
- 2.7. Time & Work
- 2.8. Ratio and Proportion
- 2.9. Area
- 2.10 Mixtures and Allegation

### UNIT III

- 3. Data Interpretation
- 3.1. Data Interpretation
- 3.2. Tables
- 3.3. Column Graphs
- 3.4. Bar Graphs
- 3.5. Line Charts
- 3.6. Pie Chart
- 3.7. Venn Diagrams

4 Hours

4 Hours

### **3Hours**

### UNIT IV

- 4. Logical Reasoning (Deductive Reasoning)
- 4.1. Analogy
- 4.2. Blood Relation
- 4.3 Directional Sense
- 4.4. Number and Letter Series
- 4.5. Coding Decoding
- 4.6. Calendars
- 4.7. Clocks
- 4.8. Venn Diagrams
- 4.9. Seating Arrangement
- 4.10. Syllogism
- 4.11. Mathematical Operations

### **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

- A Modern Approach To Verbal & Non Verbal Reasoning By R S Agarwal, 2018.
- Analytical and Logical reasoning By Sijwali B S
- Quantitative aptitude for Competitive examination By R S Agarwal
- Analytical and Logical reasoning for CAT and other management entrance test By Sijwali B S
- Quantitative Aptitude by Competitive Examinations by AbhijitGuha 4th edition, 2016.

### Course Title: STRESS MANAGEMENT Course Code: BME211

L	Т	Ρ	Cr.
1	0	0	1

### **Total Hours-15**

Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Identify the nature and causes of stress in organizations
- 2. Knowledge of stress prevention mechanism
- 3. Classify the strategies that help cope with stress
- 4. Apply stress management principles in order to achieve high levels of performance and adopt effective strategies, plans and techniques to deal with stress

### **Course Content**

### UNIT I

### 1. Understanding Stress

- 1.1 Stress concept, features, types of stress
- 1.2 Relation between Stressors and Stress
- 1.3 Potential Sources of Stress Environmental, Organizational and Individual
- 1.4 Consequences of Stress Physiological, Psychological and Behavioural Symptoms
- 1.5 Stress at work place Meaning, Reasons
- 1.6 Impact of Stress on Performance
- 1.7 Work Stress Model
- 1.8 Burnout Concept
- 1.9 Stress v/s Burnout

### UNIT II

- 2. Managing Stress I
- 2.1 Pre-requisites of Stress-free Life
- 2.2 Anxiety Meaning, Mechanisms to cope up with anxiety
- 2.3 Relaxation Concept and Techniques
- 2.4 Time Management Meaning, Importance of Time Management
- 2.5 Approaches to Time Management
- 2.6 Stress Management Concept, Benefits
- 2.7 Managing Stress at Individual level
- 2.8 Role of Organization in Managing Stress/ Stress Management Techniques
- 2.9 Approaches to Manage Stress Action oriented, Emotion oriented, Acceptance oriented.

### UNIT III

- 3. Managing Stress II
- 3.1 Models of Stress Management Transactional Model, Health Realization/ Innate Health Model
- 3.2 General Adaption Syndrome (GAS) Concept, Stages
- 3.3 Measurement of Stress Reaction The Physiological Response,
- 3.4 The Cognitive Response, TheBehavioural Response.

3.5 Stress prevention mechanism - Stress management through mind control and purification theory and practice of yoga education.

- 3.6 Stress management interventions: primary, secondary, tertiary.
- 3.7 Meditation Meaning, Importance

### UNIT IV

- 4. Stress Management Leading to Success
- 4.1 Eustress Concept, Factors affecting Eustress
- 4.2 Stress Management Therapy Concept, Benefits
- 4.3 Stress Counselling Concept
- 4.4 Value education for stress management
- 4.5 Stress and New Technology
- 4.6 Stress Audit Process
- 4.7 Assessment of Stress Tools and Methods
- 4.8 Future of Stress Management

### 43

- Roy,S (2012). Managing Stress. Sterling Publication.

### Semester-III

### Course Title: ENGINEERING PHYSICS-II Course Code: BME313

### **Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Develop a solid foundation in physics principles, including mechanics, thermodynamics, and electromagnetism.
- 2. Understand the behaviour of light, interference, diffraction, and basic wave phenomena.
- 3. Gain insight into quantum theory, wave-particle duality, and fundamental atomic and molecular physics.
- 4. Explore relativity, nuclear physics, and particle physics concepts shaping the modern understanding of the universe.
- 5. Apply physics concepts to solve engineering problems, making informed design and analysis decisions.

### CourseContents

### Unit I

### ${\small Simple harmonic motion, damped and forced simple harmonic oscillator}$

Mechanicalandelectricalsimpleharmonicoscillators,complexnumbernotationandphas orrepresentation of simple harmonic motion, damped harmonic oscillator – heavy, critical and lightdamping, energy decay in a damped harmonic oscillator, quality factor, forced mechanical and electrical oscillators, electrical and mechanical impedance, steady state motion of forced dampedharmonicoscillator, powerabsorbed byoscillator.

### Unit II

### Non-

# dispersivetransverseandlongitudinalwavesinonedimensionandintroductionto dispersion

Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection

andtransmissionofwavesataboundary,impedancematching,standingwavesandtheirEi genfrequencies,longitudinalwavesandthewaveequationforthem,acousticswavesandsp eedofsound,standing sound waves. Waves with dispersion, water waves, superposition of waves and Fouriermethod,wavegroupsand group velocity.

### Unit III

### Thepropagationoflightandgeometricoptics

Fermat's principle of stationary time and its applications e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on

L	Т	Р	Cr.
3	1	0	4

**Total Hours-60** 

### 15 Hours

15 Hours

them, transferformulaand thematrixmethod.

### Unit IV

### Waveoptics

Huygens' principle, superposition of waves and interference of light by wave front splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer,Mach-Zehnderinterferometer.

Farunhofer diffraction from a single slit and a circular aperture, the Rayleigh criterion for limit of resolution and the application of the solution of the s

### Lasers

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light bypopulation inversion, different types of lasers: gas lasers (He-Ne, CO2), solid-state lasers (ruby,Neodymium), dye lasers; Properties of laser beams: mono-chromaticity, coherence, directionalityandbrightness,laserspeckles, applicationsoflasers inscience,engineeringandmedicine.

### **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

### Total Hours-60

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Ability to solve various types of partial differential equations using specialized techniques.
- 2. Analyse random variables, calculate moments, and perform hypothesis tests.
- 3. Apply differential equations in different coordinate systems for real-world problemsolving.
- 4. Understand the Proficiency in bivariate distributions analysis and curve fitting using least squares method.
- 5. Understand and apply probability theory, conditional probability, and independence of events.

### CourseContents

### UNIT I

Definition of Partial Differential Equations, First order partial differential equations, solutions of first order linear PDEs; Solution to homogenous and non-

homogenouslinearpartialdifferentialequations of second order by complimentary function and particular integral method. Second-order linearequations and their classification, Initial and boundary conditions, D'Alembert'ss olution of the wave equation; Duhamel's principle for one dimensional wave equation.

### UNIT II

Heat

### diffusion

vibrationproblems,SeparationofvariablesmethodtosimpleproblemsinCartesiancoor dinates.TheLaplacianin plane, cylindrical and spherical polar coordinates, solutions with Bessel functions and Legendrefunctions.Onedimensionaldiffusion equation andits solution byseparation ofvariables.Probability spaces, conditional probability, independence; Discrete random variables, Independentrandom variables, the multinomial distribution, Poisson approximation to the binomial distribution,infinitesequencesofBernoullitrials,sumsofindependentrandomvariable s;

### UNIT III

ExpectationofDiscreteRandom Variables, Moments, Variance of a sum, Correlation coefficient, Chebyshev's Inequality.Continuous random variables and their properties, distribution functions and densities, normal,exponential and gamma densities. Bivariate distributions and their properties, distribution of sumsandquotients, conditional densities, Bayes'rule.Basic Statistics, Measures of Central tendency: Moments, skewness and Kurtosis - Probabilitydistributions: Binomial, Poisson and Normal - evaluation of statistical parameters for these threedistributions,

### Course Title: ENVIRONMENT SCIENCE Course Code: BME315

L	Т	Р	Credits
2	0	0	NC

### **Total Hours-30**

Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Measure environmental variables and interpret results
- 2. Evaluate local, regional and global environmental topics related to resource usage and management
- 3. Propose solutions to environmental problems related to resource usage and management
- 4. Interpret the results of scientific studies of environmental problems
- 5. Describe threats to global biodiversity, their implications and potential solutions

### **Course Content**

### UNIT I

**Introduction:** Definition and scope and importance of multidisciplinary nature of environment. Need for public awareness.

**Natural Resources:** Natural Resources and associated problems, use and over exploitation, case studies of forest resources and water resources.

**Ecosystems:** Concept of Ecosystem, Structure, interrelationship, producers, consumers and decomposers, ecological pyramids-biodiversity and importance. Hot spots of biodiversity.

### UNIT II

**Environmental Pollution:** Definition, Causes, effects and control measures of air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solid waste Management: Causes, effects and control measure of urban and industrial wastes. Role of an individual in prevention of pollution, Pollution case studies.

### UNIT III

**Disaster Management**: Floods, earthquake, cyclone and landslides.

**Social Issues and the Environment:** From Unsustainable to Sustainable development, Urban problems related to energy, Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns. Case studies. Environmental ethics: Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.

### 8 Hours

**10 Hours** 

Wasteland reclamation. Consumerism and waste products. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and control of pollution) Act. Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation Public awareness.

### UNIT IV

### 6Hours

**Human Population and the Environment:** Population growth, variation among nations. Population explosion – Family Welfare Program. Environment and human health, Human Rights, Value Education, HIV/AIDS. Women and child Welfare. Role of Information Technology in Environment and human health. Case studies.

### **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning. **Suggested Readings:**

**Course Title:** BASICELECTRONICENGINEERING **Course Code: BME316** 

**Total Hours-60** 

15 Hours

**15 Hours** 

Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Demonstrate electronics component and equipments like C.R.O., Function Generator and power supplies.
- 2. Analyze the V-I characteristics of PN-Junction diode and determine static resistance and dynamic resistance.
- 3. Interpret the zener diode and study the characteristics of zener diode.
- 4. Design and plot the input and output characteristics of common emitter transistor and calculate its input and output resistance.

### **Course Content**

Diodes and its Applications: Semiconductor Diode - Ideal versus Practical, Resistance Levels, Diode Equivalent Circuits, Load Line Analysis; Diode as a Switch, Diode as a Rectifier, Half Wave and Full Wave Rectifiers with and without Filters; Breakdown Mechanisms, Zener Diode – Operation and Applications; Opto-Electronic Devices – LEDs, Photo Diode and Applications; Silicon Controlled Rectifier (SCR) - Operation, Construction, Characteristics, Ratings, Applications.

### **UNIT-II**

Transistor Characteristics: Bipolar Junction Transistor (BJT) - Construction, Operation, Base, Common Emitter and Amplifying Action, Common Common Collector Configurations, Operating Point, Voltage Divider Bias Configuration; Field Effect Transistor (FET) - Construction, Characteristics of Junction FET, Depletion and Enhancement type Metal Oxide Semiconductor (MOS) FETs, Introduction to CMOS circuits;

### **UNIT-III**

Transistor Amplifiers and Oscillators: Classification, Small Signal Amplifiers - Basic Features, Common Emitter Amplifier, Coupling and Bypass Capacitors, Distortion, AC Equivalent Circuit; Feedback Amplifiers - Principle, Advantages of Negative Feedback, Topologies, Current Series and Voltage Series Feedback Amplifiers; Oscillators -Classification, RC Phase Shift, Wien Bridge, High Frequency LC and Non-Sinusoidal type Oscillators:

### **UNIT-IV**

UNIT-I

### 15 Hours

L	Т	Р	Cr.
3	1	0	4

**Operational Amplifiers and Applications:** Introduction to Op-Amp, Differential Amplifier Configurations, CMRR, PSRR, Slew Rate; Block Diagram, Pin Configuration of 741 Op-Amp, Characteristics of Ideal Op-Amp, Concept of Virtual Ground;

### **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

### Course Title: ENGINEERINGMECHANICS Course Code: BME317

L	Т	Р	Cr.
3	1	0	4

### **Total Hours-60**

**Learning Outcomes:**After completion of this course, the learner will be able to:

- 1. Understand vector representation of forces and moments in static equilibrium.
- 2. Learn to analyze rigid bodies under various force systems in static equilibrium.
- 3. Grasp the concepts of trusses, frames, and machines, and analyze their stability.
- 4. Explore friction forces and their effects on bodies in translational and rotational motion.
- 5. Understand particle motion, kinematics, and basic principles of dynamics for engineering systems.

### CourseContents

### UNIT I

Transformation of scalars and vectors under Rotation transformation; Forces in Nature; Newton'slaws and its completeness in describing particle motion; Form invariance of Newton's Second Law;Solving Newton's equations of motion in polar coordinates; Problems including constraints andfriction;Extension to cylindrical andspherical coordinates.

### UNIT II

Potentialenergyfunction;F=-

GradV,equipotentialsurfacesandmeaningofgradient;Conservativeandnonconservativeforces,curlofaforcefield;Centralforces;ConservationofAngularMomentu m; Energy equation and energy diagrams; Elliptical, parabolic and hyperbolic orbits;Keplerproblem; Application: Satellitemanoeuvres;Noninertialframesofreference;Rotatingcoordinatesystem:Five-

term acceleration formula. Centripetal and Coriolis accelerations; Applications: We ather systems, Foucault pendulum;

### UNIT III

Harmonic oscillator;Dampedharmonicmotion–over-damped,critically dampedandlightly-dampedoscillators; Forced oscillations and resonance.Definitionandmotionofarigidbodyintheplane;Rotationintheplane;Kinem aticsinacoordinatesystem rotating and translating in the plane; Angular momentum about a point of a rigid body inplanar motion; Euler's laws of motion, their independence from Newton's laws, and their necessityindescribing rigid bodymotion;

and two-dimensional

### Course Title: APPLIEDTHERMODYNAMICS Course Code: BME318

## **Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Understand of various practical power cycles and heat pump cycles.
- 2. Analyze energy conversion in various thermal devices such as combustors, air coolers, nozzles, diffusers, steam turbines and reciprocating compressors
- 3. Understand phenomena occurring in high speed compressible flows
- 4. Analyze and interpret compressor and steamturbines.

### CourseContents

### UNIT I

Introductiontosolid,liquidandgaseousfuels–Stoichiometry,exhaustgasanalysis-Firstlawanalysisof combustion reactions- Heat calculations using enthalpy tables- Adiabatic flame temperature-Chemicalequilibriumand equilibriumcomposition calculationsusingfree energy.

### UNIT II

Vapor power cycles Rankine cycle with superheat, reheat and regeneration, exergy analysis. Super-criticalandultra-super-criticalRankinecycle-Gaspowercycles,AirstandardOtto,DieselandDualcycles-

AirstandardBraytoncycle, effect of reheat, regeneration and intercooling-

Combinedgasandvaporpowercycles-

Vaporcompressionrefrigerationcycles, refrigerants and their properties.

### UNIT III

Properties of dry and wet air, use of pschyrometric chart, processes involving heating/cooling

andhumidification/dehumidification,dewpoint.Basicsofcompressibleflow.Stagnati onproperties,Isentropicflowofaperfectgasthroughanozzle,choked flow, subsonic and supersonic flows- normal shocks- use of ideal gas tables for isentropicflowandnormalshockflow-

Flowofsteamandrefrigerantthroughnozzle, supersaturation-compressible flowin diffusers, efficiency of nozzleand diffuser.

### UNIT IV

Reciprocatingcompressors, staging of reciprocating compressors, optimal stage pressu reratio, effect of intercooling, minimum

workformultistagereciprocatingcompressors.Analysisofsteamturbines,velocityand pressure compoundingofsteamturbines

Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Analysis of Resistive Circuits and Solution of resistive circuits with independent sources.
- 2. Understand the Two Terminal Element Relationships for inductors and capacitors and analysis of magnetic circuits.
- 3. Analysis of Single-Phase AC Circuits, the representation of alternating quantities and determining the power in these circuits.
- 4. Compare different types of Electrical machines and classify different electrical measuring equipment's and understanding their principles

### CourseContents

List of Experiments

- 1. Verification of ohms and Kirchhoff's Laws.
- 2. Three Phase Power Measurement
- 3. Load test on DC Shunt Motor.
- 4. Load test on Self Excited DC Generator
- 5. Load test on Single phase Transformer
- 6. Load Test on Induction Motor
- 7. Characteristics of PN and Zener Diodes
- 8. Characteristics of BJT, SCR and MOSFET
- 9. Design and analysis of Half wave and Full Wave rectifiers
- 10. Measurement of displacement of LVDT

### Semester:IV

### Course Title: HEATTRANSFER&THERMALMACHINES Course Code: BME411

### **Learning Outcomes:**After completion of this course, the learner will be able to:

- 1. Formulateandanalyzea heat transferproblem involvinganyofthethreemodesofheattransfer
- 2. Examineexactsolutionsforthetemperaturevariationusinganalyticalmethodswherep ossibleoremployapproximatemethods orempirical correlations to evaluate therate ofheat transfer.
- 3. Designheatexchangersandestimatetheinsulationneededtoreduceheatlosseswheren ecessary.

### CourseContents

### UNIT I

Three modes of heat transfer; Examples of equipment (like air conditioner and air cooler) involvingheattransfer; Derivation ofheat balanceequation.Steady 1D solution for conduction heat transfer in Cartesian, cylindrical and spherical geometry;Conceptofconductionandfilmresistances;Criticalinsulationthickness;Lu mpedsystemapproximation and Biot number; Heat transfer through pin fins; 2D conduction solutions for steadyand unsteadyheat transfer.

### UNIT II

Hours Basic equations; Boundary layers; Forced convection; External and internal flow s;Naturalconvective heat transfer; Dimensionless parameters for forced and free convection heat transfer; Correlations for forced and free convection; Approximate solutions to laminar boundary layerequations for internal and external flow; Estimating heat transfer rates in laminar and turbulent flowsituationsusingappropriatecorrelations for freeand forcedconvection.Interaction of radiation with materials; Definitions of radiative properties; Stefan Boltzmann's law;Blackandgreybodyradiation;Calculationofradiationheattransferbetweensurfac esusingradiativeproperties; View factors and the radiosity method; Examples for two-body enclosures; Radiationshield.

### UNIT III

**Hours**Function, classification and configuration of heat exchangers; Evaluation of mean

temperature difference; Heat exchange reffectiveness; Analysis, design and selection of heat exchangers. Pool boiling; Flow boiling; Film and drop wise condensation

### UNIT IV

**Hours**Analogy between heat and mass transfer; Mass diffusion; Fick's Law; Steady and transient massdiffusion;Simultaneousheat and mass transfer.

L	Т	Р	Cr.
3	1	0	4

Total Hours-60

Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Understand the concept of Comprehend the fundamental properties and behaviour of fluids, including viscosity, pressure, and buoyancy.
- 2. Analysis the Master fluid flow principles, equations of motion, and Bernoulli's theorem for analysing fluid behaviour in various scenarios.
- 3. Learn techniques to measure fluid flow rates and pressures, and explore methods for controlling fluid flows.
- 4. Apply fluid mechanics principles to solve real-world engineering problems, from pipe design to energy conversion in hydraulic systems.

### **CourseContents**

### UNIT I

Definitionoffluid;Newton'slawofviscosity;Unitsanddimensions;Physicalproperties of fluids; Control volume; Continuity equation and momentum equation; Incompressibleflow;Bernoulli's equation and its applications.Dimensionallyhomogeneousequations;BuckinghamPiTheorem;Calcul ation of dimensionless parameters. Similitude and complete similarity; Model scales; Basicboundarylayertheoryand analysis.

### UNIT II

Different approaches; Reynolds transport theorem; Flow visualization; Types offlow;Strainrate,streamline,streakline,pathlinesandstreamtubes;Continuityequat ioninCartesiancoordinatesin3Dforms;Velocityandaccelerationoffluidparticles;Velo citypotentialfunctionandstreamfunction. Momentum equation:Nervier Stoke equation; Developmentof Euler'sequation; Bernoulli's equation and application; through orifice; and unsteady flow Orificeplacedinpipe; Steady Venturimeter; Flowovertriangularandrectangularnotches; Pitot tube. (4)

### UNIT III

Viscous/Laminar flow - Plane Poiseuille flow and Coutte flow;Laminar flow through circular pipes; Loss of head and power absorbed in viscous flow; Turbulentflow-

Reynoldsexperiment; Frictionallossesinpipeflow; Shearstressinturbulentflow; Major andminor losses (Darcy's and Chezy's equation); Flow through siphon pipes; Branching pipes and equivalent pipe.

### UNIT IV

Euler'sequation; Theory of Rotodynamic machines; Various efficiencies; Velocity components at entry and exit of the rotor; Velocity triangles; Centrifugal pumps workingprinciple, work done by the impeller and performance curves; Cavitation in pumps; Reciprocatingpump-workingprinciple. Classification of water turbines; Heads and efficiencies; Velocity triangles; Axial, radial and mixed flow turbines;

15 Hours

**Learning Outcomes:**After completion of this course, the learner will be able to:

- 1. Develop proficiency in analyzing motion patterns and geometrical relationships in machine mechanisms.
- 2. Understand the concepts of velocity and acceleration analysis, determining dynamic behavior of machine components.
- 3. Learn techniques to analyze forces and torques in moving mechanisms, aiding in design and optimization.
- 4. Apply kinematics and dynamics principles to assess the performance, efficiency, and safety of machine systems.

### CourseContents

### UNIT I

Definition and types of joints; Lower and higher pairs; Classification of mechanisms based

onfunctionandconstraints;Commonmechanismssuchasslidercrankand4-

barmechanismsandtheirinversions; Quick return mechanism, Straight line generators, rocker mechanisms, universal joints, steeringmechanisms, etc.

### UNIT II

### 15 Hours

15 Hours

15 Hours

DegreeoffreedomandGrübler'sformula;Grashof'sruleandrotatability limits;Mechanicaladvantage;Transmission angle;Limit positions.Graphical synthesis of dyads and crank-rocker for two- and three-position synthesis for path andmotiongeneration.Displacement, velocity, and acceleration analysis; Velocity analysis using instantaneous centers;Position,velocityandaccelerationanalysisusingloopclosureequations;Coinci dentpoints;Corioliscomponentofacceleration.

### UNIT III

Two & three force members; Force & moment equilibrium; Inertial forces; Equations of motion forforce-bar and slider-crank mechanisms.Classification and terminology; Displacement, velocity, acceleration and jerk diagrams; Uniformvelocity,parabolic,simpleharmonicandcycloidalmotions;Derivativesoffollo wermotions;Circularandtangentcams;Pressureangleandundercutting;Graphicalan danalyticaldisccamprofilesynthesisforrollerandflat facefollowers.

### UNIT IV Hours

Involute and cycloidal profiles; gear parameters; Fundamental law of gearing and conjugate action;Spur gear contact ratio and interference; Helical, bevel, worm, rack & pinion gears; Epicyclic andregular geartrain kinematics;Force analysis ofspur,helical, beveland wormgearing.

15

### Semester:V

### **Course Title:** MACHINEELEMENT&SYSTEMDESIGN **BME511 Course Code:**

L	Т	Р	Cr.
3	1	0	4

### Total Hours-60

### **Learning Outcomes:**After completion of this course, the learner will be able to:

- 1. Develop the ability to choose appropriate materials and components for designing reliable and efficient mechanical systems.
- 2. Understand design factors such as stress analysis, fatigue, wear, and optimization for safe and durable machine elements.
- 3. Learn various methods of joining components, including welding, fasteners, and adhesives, while considering their structural integrity.
- 4. Familiarize yourself with industry standards and codes to ensure compliance and safety in machine element design.

### **CourseContents**

### UNIT I

Anatomyofmachines;Functionaldissectionofmotorcycle,washingmachine,sewingm achine, etc. into machine elements including gears, rack and pinions, cams, chains. belts. pulleys.

flywheels, bearings, shafts, keys, brakes, etc.; Designconsiderations-

Limits, fits and standardization; Friction and lubrication. Force analysis of machine elem entsandmachinesystems; Application to powerscrews and couplings, clutches, andbrakes.

### UNIT II

Static failure theories including normal stress theory, shear stress theory, distortion energy theory;von Mises stress; Factor of safety; Stress concentration factors; Fatigue failure theories: mean and alternating stresses, yield, ultimate, and endurances trength; Goodman, Gerber, an dSoderberglines.

### **UNIT III**

Springs - Helical compression, tension, torsional and leaf springs; Fasteners threaded fasteners, bolted joints, preloaded bolts, rivets and welded joints; Shafts shafts under static and fatigueloadings;Keys;Slidingandrollingcontactbearings;Transmissionelementstransmissionratioandefficiencyofspur, helical, beveland worm gears; belt and chain drives;Flywheels.

### UNIT IV

Singledegree-of-

freedomsystems;Naturalfrequencyandcriticaldamping;Forcedvibration;Resonance; Balancing of reciprocating and rotating masses; Torsional vibration and critical speedsofshafts.Casestudiesonautomobilesuspensions,automatictransmissions,m aterialconveyorsystems, construction machinery, etc.

## **Course Title:** MECHATRONICS, ROBOTICSANDCONTROL **Course Code: BME512**

# **Total Hours-45**

# **Learning Outcomes:**After completion of this course, the learner will be able to:

- 1. Abilitytorecognizeandanalyze electro-mechanicalsystemsindailylives.
- 2. Understandthe roleofsensors, actuators, and controls in mechatronic systems.
- Familiaritywithcontroltheoryandcontrollerdesign. 3.
- Understandthemeasurementofvariousquantitiesusinginstruments, their accura 4. cv&range,andthetechniquesforcontrollingdevicesautomatically.

# **CourseContents**

# UNIT I

Electro-mechanicalsystems; Typical applications; Examples-

automobiles, homeappliances, medical

etc.Transductionprinciples;Sensitivity,accuracy,range,resolution,noisesources;Se nsorsforcommonengineeringmeasurements-

proximity,force,velocity,temperature,etc.;Signalprocessingandconditioning; Selection ofsensors.

# UNIT II

Pneumatic and hydraulic actuators; Electric motors including DC, AC, BLDC, servo and stepper motors; Solenoids and relays; Active materials - piezoelectric and shapememoryalloys.Microprocessors and their architecture; Memory and peripheralinterfacing; Programmable Microcontrollers; Programming; Logic Controllers: PLC principle andoperation; Analog anddigitalinput/outputmodules;Memory module;Timers,internalrelays,counters and data handling; Industrial automation systems; Basic PLC programming; Industry kits(Arduino, RaspberryPi, etc.). **10 Hours** 

# UNIT III

Robot configurations: Denavit-Hartenberg serial and parallel; parameters; Manipulators kinematics: Rotation matrix. Homogenous transformation matrix; Direct and inverseKinematics for robot position and orientation; Workspace estimation and path planning; Robotvision; Motion tracking; Robot programming and control; Industrial robots - Pick and place robots, sorting, assembly, welding, inspection, etc.

# **UNIT IV**

Basiccontrolconcepts;Feedback;Openandclosedloopcontrol;Conceptofblockdiagra ms;P,PIandPIDcontrollers;Tuningthegainofcontrollers;Systemmodels,transferfunct ions, system response, frequency response; RootLocus method and Bodeplots. Demons tration projects using simulation software (e.g., MATLAB, Scilab, and ROBODK) for control systems and robotics.

# **Transaction Mode**

## **Course Title: MANUFACTURINGPROCESSES Course Code: BME504**

# **Total Hours-60**

**Learning Outcomes:**After completion of this course, the learner will be able to:

- 1. Understand various manufacturing methods to transform raw materials into finished products through shaping, joining, and finishing.
- 2. Learn the principles and applications of machining processes such as turning, milling, drilling, and grinding.
- 3. Examine the Master forming techniques like forging, casting, and sheet metal forming to create complex shapes with desired properties.
- 4. Explore methods like welding, soldering, and adhesive bonding to efficiently join components into functional assemblies.

# **CourseContents**

# UNIT I

Additive, subtractive and shaping processes; Relative advantages and limitations; Interdependencyofgeometry, material and process; Effect on product quality and cost; Part de signfor manufacturability; Processselectioncriteria. Metal casting (sand, die and investment casting), Bulkforming (forging, rolling, extrusion, drawing) and sheet (shearing, deep drawing. forming bending);Thermoplasticandthermosetplasticprocesses(ex.injectionandblowmoldin g);Powdermetallurgy;Metalinjection molding; Glass andcompositeprocesses (layup).

# UNIT II

Turning, Drilling, Milling, Grinding and other finishing processes; Single and multipoint cutting tools; Cutting tool materials; Cutting fluids; Materialremovalrates, surfacefinish, accuracy, integrityand machinabilityAbrasive Jet Machining, WaterJetMachining;UltrasonicMachining;ElectricalDischargeMachining,WireEDM ;Electro-

ChemicalMachining;LaserBeamMachining,PlasmaArcMachiningandElectronBeam Machining; Microand nano manufacturing.

# UNIT III

Extrusion;vatpolymerization,powderbedfusion;materialjetting, binderjetting; direct energydeposition and lamination processes. Arc welding, gas welding, shielded metal arcwelding; GMAW (MIG) and GTAW (TIG); Brazing and soldering; Solid state joining; Adhesivebonding.

# UNIT IV

Casting-

metalflow, solidification and cooling; application to design of gating and feeding systems f orqualityand yieldoptimization;ORForming-Plasticdeformationand yieldcriteria; load estimation; OR Machining - Orthogonal cutting, various force components; Chipformation, Tool wearandtool life.

## **Course Title: MEASUREMENTSANDMETROLOGY Course Code: BME513**

# **Total Hours-45**

L

Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Basic knowledge about measurement systems and their components
- 2. Various instruments used for measurement of mechanical and electrical parameters
- 3. Integrate measurement systems for process monitoring and control
- 4. Design of limits, fits and tolerances for given applications

# **CourseContents**

# UNIT I

Parameters-geometry(straightness,flatness,roundness, etc.), displacement, force, speed, torque, flow, level, pressure, temperature, acceleration, etc.; Definitions: Accuracy, precision, range, resolution, uncertainly and error sources; Regressionanalysis.Structureandexamplesofmeasurementsystems;Calibrationpri nciples: Linear

and angular measurements; Comparators; Gaugedesign; Interferometry.

# UNIT II

Definitions: Tolerance and grades, Hole and zone shaftsystem, Geometric tolerances, Tylor's principle of gauging, Design of tolerances for variousapplications; Tolerance analysis in manufacturing and assembly; Role of Design ofManufacturing.Dimensional metrology in metrology Vernier, micrometers, LVDT; Form metrology - form tester, surface profiler, CMM, 3D scanning; Surfacemetrologyopticalmicroscopes, Laserscanningmicroscopes, electronmicroscopy(SEM/TEM), xraymicroscopy,Ramanspectroscopy;Tool wear, workpiece quality and processmetrology.

# UNIT III

temperature, thermal conductivityanddiffusivity; Measurement of Flowobstructionmethods; Magneticflowmeters.Signal generators and analysis; Waveanalyzer; Spectrum analyzer; Frequency counters - measurement errors, extending the frequency range; Transducers - types, strain gages, displacement transducers: Diaital data acquisition interfacing transducers system \_ toelectronicscontrolandmeasuringsystem;Instrumentationamplifier;Isolationamplifier;Co mputer-controlledtest systems.

# UNIT IV

DOEtechniques; Taguchiorthogonal arrays; Data acquisition, signal processing and conditioning; Error of a system of idealelements; Error probability density function of system of non-ideal elements: Error а reductiontechniques; Qualitycontrol and assurancein industry.

L	Т	Р	Cr.
0	0	2	1

Course Code: BME514

LAB

**Total Hours-15** 

# CourseContents

List of Experiments

- 1. Design and assembly of hydraulic / pneumaticcircuit.
- 2. Study of power steering mechanism using cut piecemodel
- 3. Study of reciprocating movement of double acting cylinder using pneumatic directioncontrol valves
- 4. Use of direction control valve and pressure control valves clamping devices for jig andfixture
- 5. Study of robotic arm and its configuration
- 6. Study the robotic endeffectors
- 7. Study of different types of hydraulic and pneumaticvalves

L	Т	Р	Cr.
0	0	2	1

**Total Hours-15** 

# CourseContents

List of Experiments

- 1. Measurement with the help of vernier caliper and micrometer
- 2. Measurement of an angle with the help of sine bar
- 3. Measurement of surface roughness
- 4. Measurement of gear elements using profile projector
- 5. Three wire method to determine effective diameter of external threads
- 6. Measurement of thread element by Tool makers microscope
- 7. Calibration of a pressure gauge with the help of a dead weight gauge tester
- 8. Use of stroboscope for measurement of speed of shaft
- 9. Use of pilot tube to plot velocity profile of a fluid through a circular duct
- 10. Preparation of a thermocouple, its calibration and application for temperature measurement

Course Title: PROJECT MANAGEMENT Course Code: BME517

L	Т	Р	Cr.
3	0	0	3

## **Total Hours-45**

**Learning Outcomes:**After completion of this course, the learner will be able to:

- 1. Differentiate between project, program, and sub-project by identifying contrasting and related characteristics of each utilizing examples from engineering specific industries.
- 2. Employ an integrated real-world engineering project to create deliverables, such as a work breakdown structure and a project charter, scope statement, project network diagrams and time-driven schedule.
- 3. Identify each of the following tools, techniques or outputs using an automated project management tool: Critical path; Schedule compression; Crashing; Slack/float; Fast tracking; and Resource leveling
- 4. Apply project scheduling concepts, geared toward typical Mechanical engineering Concepts, such as Activity Gantt Chart, resource gram/ histogram; resource spreadsheet; and resource-driven schedule through multimedia presentation showing step-by-step procedure.

# CourseContents

# UNIT I

# 13 Hours

Project Management Concepts, Project Planning, Resource Scheduling, Critical Chain Scheduling, Project Quality Management.

# UNIT II

# **10 Hours**

12 Hours

**10 Hours** 

Project performance Measurement and Control, Project Closure/ Termination.

# UNIT III

Managing Project Teams, IT in Projects, International Projects: Issues in managing international projects.

# UNIT IV

Selection and training of employees, cross cultural considerations.

# **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

# **SEMESTER: VI**

# Course Title: COMPUTERAIDEDDESIGN&ANALYSIS Course Code: BME611

L	Т	Ρ	Credits
3	0	0	3

# **Total Hours-45**

**Learning Outcomes:**After completion of this course, the learner will be able to:

- 1. Understand and appreciate use of computer in product development.
- 2. Apply algorithms of graphical entity generation.
- 3. Understand mathematical aspects of geometrical modelling.
- 4. Analysis and use finite element methods for analysis of simple components.

## **Course Content** UNIT I

Introduction: Role of computers indesign process; Computer aided design, analysis an dmanufacturing; Computer integrated manufacturing; Popular CAD software used in industry; Inputandoutput devices.

Transformations: Matrix representation of points, lines and planes; 2D transformation for translation, scaling, rotation and reflection; Homogeneous representation & concatenation; 3Dtransformations.

UNIT II

# 12Hours

Curves and Surfaces: Representation of curves; Hermite curves, Bezier curves, B-splinecurves, Rational curves; Surface modelling-

parametricrepresentation, planarsurface, surface of revolution, Coons and bicubicpatches, Bezierand B-splinesurfaces.

Solid Modelling: Solid modelling techniques - sweep (linear and curved), Boolean(constructive solid geometry) and other techniques; Solid model representation (Boundary andConstructive Solid Geometry); Medical modelling (pixels, scans and voxels); Exchange standards(IGES,DXF, STEP, STLetc.).

# **UNIT III**

Engineering Analysis: Introduction to finite element method; Principle of potentialenergy; FE analysis of 1D element problems (spring, bar, truss elements); Development of elementstiffness equation and their assembly; Plain strain and plain stress problems; Domain discretization, pre-processing and postprocessing; Verification and validation; Popular CAE software used inindustry

Introduction to CFD and HT: Basic theoretical framework, Boundary conditions, ApplicationExamples: thermal and fluid machines.

# **UNIT IV**

**Design Optimization:** Purpose and application of optimum design, Primary and subsidiary design equations, Limit Equations, Normal, redundant and incompatible specificationsproblems;Computer-aided designoptimization.

# **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

# **Course Title: MANUFACTURINGAUTOMATION** Course Code: BME612

L	Т	Ρ	Credits
3	0	0	3

# **Total Hours-45**

**Learning Outcomes:**After completion of this course, the learner will be able to:

- 1. Understandtheimportanceofautomationin manufacturingvaluechain
- 2. Gettheknowledge of various elements of automation tools and techniques
- 3. Understandtheemergingdigitalmanufacturingtrends
- 4. Analysis of Manufacturing Automation case studies

# **Course Content** UNIT I

**Introduction**:Definition;Reasonsforautomating;Strategies;Typesofautomation;Numer icalcontrol(NC,CNC,DNC);IntroductiontoCNCprogrammingandcomputeraidedprocessplanning.

MachineandProcessAutomation:CNCmachines,Automatedflowlines(types,selecti on);Workpart transport and transfer mechanisms; Feedback systems and control; Modular and reconfigurablemachines, adaptive machine controls.

# UNIT II

Automated Assembly Systems: Historical developments; Choice of assembly methods; Design forautomated assembly; Transfer systems; Vibratory and nonvibratory feeders; Feed tracks, partorienting and placing mechanisms.

Factory Automation: Lean manufacturing, Automation scalability (fixed, programmable,

flexibleandreconfigurable);Designandanalysisofautomatedflowlines;Averageproduc tiontime, production rate, line efficiency; Analysis of transfer lines without storage; Parti alandfullautomation.

# UNIT III

Automation Tools and Techniques: Mechanical, electro-mechanical, pneumatic and hydraulicsystems; Sensors integration; Process monitoring, data analysis and control using actuators; Robots(pick, place, assembly, welding, painting, etc.); Automatic Guided Vehicles; Automated inspectionand measurement (CMM and 3D Scanning); Machine vision, AI and machine learning; Humanmachineinterfaces; Examples and casestudies.

Advanced Automation Trends: Digital, inclusive, smart and distributed manufacturing; Industry4.0; Digital transformations in shop-floors (CIM to Smart factory; Intelligent machines to SmartMachines; Factory automation to Distributed automation;Human senseto systemsensed).

# UNIT IV

**ExamplesandCaseStudies:**Pickandplacerobots,testingandsortingbasedsystems,et c;Orientation of parts: in-bowl and out-of-bowl toolings; Manufacturing equipment embedded withdigital data and driven by adoptive controls; Manufacturing automation with autonomous decisionstaken by computers based the realistic process/machines (production conditions) on data

# Course Title: PRODUCTION&OPERATIONMANAGEMENT Course Code: BME613

L	Т	Р	Credits
3	1	0	4

## **Total Hours-60**

**Learning Outcomes:**After completion of this course, the learner will be able to:

- 1. Provide knowledge on production management techniques that develop and establishrelationshipbetween market demandand production capability.
- 2. Understandtheoperation management:Resourceplanningandtheir utility
- 3. Understand the scientific approach and tools and techniques that assure marketcompetitivenessbyensuringthequality, costand time,
- 4. Analysis the minimal spanning tree and maximumflowmodel.

# Course Content UNIT I

# 18 Hours

**Introduction:**Scopeofproductionmanagement.Productionsystemandresources(ma chines,tooling, etc.); Types of production (batch, flow and unit), Roles of line supervisors and productionmanagers.

**Project Management:** Project life cycle: concept phase (RFQ, Quotations, Proposals),

Projectinitiations, DPR preparation (project value, business cased evelopment and feasi bilitystudy);Projectplanning (obtaining resources, acquiring financing and procuring required materials); Project team, producing quality outputs, handling risk, acceptance criteria; Project execution (a llocationofresources, scheduling, building deliverables); Project Monitoring and control: Project networks, progress review (physical and financial), CPM and PERT, critical path, re-scheduling; Projectclosure: acceptance of project deliverable: Analytics: Performance. capability aggregation, costbenefitanalysis, variability analysis, Output-

outcomeanalysis, project documentation, best practices, and depository.

UNIT II

# 12 Hours

15 Hours

**Production Planning and Control:** Production planning, Process planning, Resource planning,demand-utility mapping (production capability index, forecasting models, aggregate productionplanning,materialsrequirementplanning);InventoryManagement:Econo micorderQuantity,discount models, stochastic inventory models, practical inventory control models, JIT; Supply chainandmanagement.

# UNIT III

**Factory Management:** Factory layout: line balancing, material flow and handling, Lean and greenmanufacturing, Human resource management, Training need analysis, Advantage and opportunities for Digitalization, Advanced factory systems: TQM; Important acts, regularities and safety norms, Reliability assessment of processes, Block chain, Energy management, Efficiency & throughput, Overallequipment effectiveness. Process capability, lean manufacturing.

# UNIT IV

**OperationManagement:**Linearprogramming,objectivefunctionandconstraints,gra phicalmethod, Simplex and duplex algorithms, transportation assignment; Simple queuing theory models;Traveling Salesman problem; Network models: shortest route, minimal spanning tree, maximumflowmodel.

# Transaction Mode

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Understand and appreciate use of computer in product development.
- 2. Apply algorithms of graphical entity generation.
- 3. Understand mathematical aspects of geometrical modelling.
- 4. Understand and use finite element methods for analysis of simple components.

# **Course Content**

- 1. Prepare a programme for plotting lines and curves using algorithms learned.
- 2. Introductory exercise for 3-D modelling.
- 3. Exercise for advanced 3-D modelling.
- 4. Exercise for 3-D editing options.
- 5. Exercise for Assembly modelling.
- 6. Exercise for surface modelling.
- 7. Introductory exercise for finite element analysis.

# Course Title: MANUFACTURING AUTOMATION LAB Course Code: BME617

L	Т	Ρ	Credits
0	0	2	1

# **Total Hours-15**

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Develop microcontroller programs to monitor and control the manufacturing systems.
- 2. Design and develop an automated system for a given industrial application.
- 3. Select and integrate various components of automation like sensors, actuators, PLC and robots for a given application

# **Course Content**

- 1. Draw the circuit diagram to operate single acting pneumatic cylinder using 3/2 push button direction control valve.
- 2. Draw the circuit diagram to operate double acting pneumatic cylinder using 5/2 direction control valve using push button momentary switch/push button latch.
- 3. Draw the circuit diagram to operate single acting pneumatic cylinder using 5/2 air spring valve & PLC.
- 4. Draw the circuit diagram to operate double acting pneumatic cylinder using 5/2 air spring valve & PLC.
- 5. Draw the circuit diagram to operate double acting hydraulic cylinder using 4/2 direction control valve (solenoid control) using push button switch/latch switch.
- 6. Draw the circuit diagram to operate double acting hydraulic cylinder using 4/2 direction.
- 7. Draw the circuit diagram to operate double acting hydraulic cylinder using 4/2 direction control valve (solenoid control) using PLC.
- 8. Draw the circuit diagram to operate double acting hydraulic cylinder using 4/3 direction control valve (solenoid control) using PLC.

# **Course Title: OPERATION RESEARCH Course Code: BME618**

# **Total Hours-45**

Credits

3

**Learning Outcomes:**After completion of this course, the learner will be able to:

- 1. Apply various types of deterministic models like linear programming, transportation model etc.
- 2. Analysis various types of stochastic models like waiting line model, project line model, simulation etc.
- 3. Develop the relationship between a linear program and its dual and perform sensitivity analysis.
- 4. Understand the decision making environment and apply decision making process in the real world situations.

# **Course Content**

# UNIT I

Introduction: Origin of Operation Research, Historical Standpoint, Methodology, Different Phases, Characteristics, Scope and Application of Operations Research:

Linear Programming Problem: Introduction, Requirement of LP, Basic Assumptions, Formulation of LP, General Statement of LP, Solution techniques of LP: Graphical Methods, Analytical Methods: Simplex, Big M and Two Phase, Special Case of LP Problem. Graphical Sensitivity Analysis.

# **UNIT II**

Transportation and Assignment: Transportation Problems definition, Linear form, Solution methods: North west corner method, least cost method, Vogel's approximation method. Degeneracy in transportation, Modified Distribution method, Unbalanced problems and profit maximization problems. Transshipment Problems. Assignment Problems and Travelling sales man Problem 12 Hours

# UNIT III

# **Dynamic Programming:**

Introduction to deterministic and probabilistic dynamic programming. Solution of simple problems. Advantages of dynamic

# **Queuing theory:**

Types of queuing situation: Queuing models with Poisson's input and exponential service, their application to simple situations.

# **UNIT IV**

# **Replacement Models**:

Replacement of items that deteriorate, Replacement of items whose maintenance and repair costs increase with time, replacement of items that fail suddenly; replacement of items whose maintenance costs increase with time and value of money also changes, individual replacement policy, group replacement policy.

# Network models:

PERT & CPM introduction, analysis of time bound project situations, construction of networks, identification of critical path, slack and floats, crashing of network for cost reduction, resource leveling and smoothening.

**Total Hours-100** 

# **Course Content**

It is intended to start the project work early in the seventh semester and carry out both design andfabricationofamechanicaldevicewhoseworkingcanbedemonstrated.Thedesignis expected to be completed in the seventh semester and the fabrication and demonstration will be carried out in the eighthsemester.

# **Profession Elective Course Group: Technology Course Title: FINITE ELEMENT ANALYSIS** Course Code: BME901

# **Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Describe the procedure involved to solve a problem using Finite Element Methods.
- 2. Examine the element stiffness matrices using different approach.
- 3. Understand a 2D problem using line, triangular, axisymmetric and quadrilateral element.
- 4. Examine the theory and characteristics of finite elements that represent engineering structures.

# **Course Content**

# UNIT I

# Introduction:

Finite element methods, history and range of applications.

# **Finite Elements:**

Definition and properties, assembly rules and general assembly procedure, features of assembled matrix, boundary conditions.

## UNIT II

# **Continuum Problems:**

Classification of differential equations, variational formulation approach, Ritz method, element equations from variations. Galerkin's weighted residual approach, energy balance methods.

# UNIT III

# **Element Shapes and Interpolation Functions:**

element shapes, generalized coordinates, polynomials, Basic natural coordinates in one-, two- and three-dimensions, Lagrange and Hermite polynomials, two-D and three-D elements for C<sup>o</sup> and C<sup>1</sup> problems, Coordinate transformation, iso-parametric elements and numerical integration.

## UNIT IV

# **Applications & Case Studies:**

Application of finite element methods to elasticity and structural, heat transfer, fluid-flow, lubrication and general field problems.

# **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

# **Suggested Readings**

# Course Title: COMPUTATIONAL FLUID DYNAMIC Course Code: BME902

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Develop the governing equations for fluid flow
- 2. Apply finite difference, finite volume and finite element methods to solve the flow problems
- 3. Examine the stability and conduct a grid-convergence assessment
- 4. Evaluate turbulence models to engineering fluid flow problems

# Course Content UNIT I

# **Hours**Equations of fluid dynamics

Basic concepts Eulerarian and Lagrangian methods of describing fluid flow motion, acceleration and deformation of fluid particle, vorticity. Laws governing fluid motion, continuity, Navier – stokes & energy equations. Boundary layer equation, Euler equations, potential flow equations, Bernoulli's equation and vorticity transport equation. Initial and boundary conditions.Classification of equation of motions – hyperbolic, parabolic, elliptic.

# UNIT II

# Hours Mathematical Preliminaries

Numerical integration. Review of linear algebra, solution of simultaneous linear algebraic equations – matrix inversion, solvers – direct methods, elimination methods, ill conditioned systems; Gauss- Sidel method, successive over relaxation method.

# UNIT III

Grid Generation

Transformation of coordinates. General principles of grid generation – structured grids in two and three dimensions, algebraic grid generation, differential equations based grid generation; Elliptic grid generation, algorithm, Grid clustering, Grid refinement, Adaptive grids, Moving grids. Algorithms, CAD interfaces to grid generation. Techniques for complex and large problems: Multi block methods.

# Finite difference discretization

Elementary finite difference coefficients, basic aspects of finite difference equations, consistency, explicit and implicit methods, errors and stability analysis.Stability of elliptic and hyperbolic equations. Fundamentals of fluid flow modeling-conservative property, upwind scheme, transporting property, higher order up winding. Finite difference applications in heat transfer – conduction, convection.

# UNIT IV

Finite Volume Method

L	Т	Ρ	Credits
3	0	0	3

# **Total Hours-45**

10

12 Hours

13 Hours

10

Introduction, Application of FVM in diffusion and convection problems, NS equations – staggered grid, collocated grid, SIMPLE algorithm. Solution of discretized equations using TDMA.Finite volume methods for unsteady problems – explicit schemes, implicit schemes. Finite Element Method: Introduction. Weighted residual and vibrationalformulations. Interpolation in one-dimensional and two-dimensional cases. Application of FEM to ID and 2D problems in fluid flow and heat transfer

# Transaction Mode

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

12 Hours

13

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Understandtheprinciplesofoperationfordifferentpowerplants and theireconomics.
- 2. Design of chimney in thermal power plants, knowledge of cooling tower operation, numerical on surface condenser design.
- 3. Discussing environmental and safety aspects of power plant operation.
- 4. Basic knowledge of Different types of nuclear power plants including Pressurized water reactor, Boiling water reactor, gas cooled reactor, liquid metal fast breeder reactor

# **Course Content**

# UNIT I

Introduction: Powerplants-types and classification based on energy sources. Coal based Thermal Power Plants: Basic Rankine cycle and its modifications; Layout of moderncoal power plant; Super critical boilers, FBC boilers; Turbines, condensers, steam and heating rates; Subsystems of thermal power plants; Fuel and ash handling; Draught system; Feed water treatment; Binarycycles and cogeneration systems.

# UNIT II

## 10 Hours Gas Turbine and Combined Cycle Power Plants: Brayton cycle analysis and optimization; Components of gas turbine power plants; Combined cycle plants; Integrated Gasifier power basedCombinedCycle(IGCC)systems.

# UNIT III

# Hours

Nuclear Power Plants: Basics of nuclear energy conversion; Layout and subsystems of nuclearpower plants; Boiling Water Reactor (BWR); Pressurized Water Reactor (PWR); CANDU Reactor; Pressurized Heavy Water Reactor (PHWR); Fast Breeder Reactors (FBR); Gas cooled and liquidmetalcooled reactors; Safetymeasures fornuclear powerplants.

## HydroelectricPowerPlants:Classification;Typicallayoutandcomponents. UNIT IV 10 Hours

RenewablePowerSystems: Principlesofwind, tidal, solarphoto-

voltaic, solar thermal, geothermal, biogas and fuel cell powersystems.

**Energy Economics and Environment:** Economic and environmental issues; Power tariffs; Loaddistribution parameters; Load curve; Capital and operating cost of different power plants; Pollutioncontroltechnologies includingwastedisposaloptions forcoal and nuclear plants.

105

# **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

3	0	0	3

# Total Hours-45

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Acquire knowledge of technical competency combined with research to generate innovativesolutionsin Energyengineering.
- 2. Prepare the students to exhibit a high level of professionalism, integrity, environmental and social responsibility, and lifelongindependent learningabilitywithenvironment inmind.
- 3. ApplyandshareindepthknowledgeintheareaofEnergyEngineeringandMa nagement.
- 4. Abilityto

applyengineeringandscientificprinciplesfortheeffectivemanagementofen ergysystems

# **Course Content**

# UNIT I

Introduction: Basic concepts of energy; Introduction to Renewable Energy Technologies; EnergyandEnvironment-

globalwarming, acidrains, depletion of ozonelayer; Globaland Indian Scenario of re newableenergysources; Energystorage-necessityandenergystoragemethods.

**Solar Energy**: Fundamentals; Solar Radiation; Estimation of solar radiation on horizontal and inclined surfaces; Measurement of solarradiation data. UNIT II

Solar Thermal Systems: Introduction; Basics of thermodynamics and heat transfer; Flat platecollector; Evacuated Tubular Collector; Solar air collector; distillation;Solarcooker; Solar concentrator; Solar Solarrefrigeration andairconditioning;Thermal energystoragesystems.

SolarPhotovoltaicSystems:Introduction;SolarcellFundamentals;Characteris ticsandclassification;Solarcell:

Module, panelandArrayconstruction; Photovoltaic thermal systems. 10 Hours

# UNIT III

**Wind Energy**: Introduction; Origin and nature of winds; Wind turbine siting; Basics of fluidmechanics; Wind turbine aerodynamics; wind turbine types and their construction; Wind energy conversion systems.

**Fuelcells**:Overview:Classificationoffuel cells;Operatingprinciples; Fuelcellthermodynamics.

# UNIT IV

**Biomass Energy**: Introduction; Photosynthesis Process; Biofuels; Biomass Resources:

Biomassconversiontechnologies;Urbanwastetoenergyconversion;Biomassgasi fication.

**Other forms of Energy**: Introduction: Nuclear, ocean and geothermal energy applications; Originandtheirtypes; Working principles.

### Course Title: DESIGN FOR MANUFACTURING & ASSEMBLY **Course Code: BME905**

## Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Identifyprimaryandsecondarycomponentsthroughfunctional analysis
- 2. Calculatethedesignefficiencyfortheirproductdesign
- 3. Identifyvariousdesignrecommendationofdesignprocess
- 4. Analyzeandderivethegripping, insertion and fixing values through fitting analy sisoftheproduct

### **Course Content**

### UNIT I

Introduction: Design philosophy steps in design process, general design rules manufacturability, for basic

principlesofdesignLingforeconomicalproduction, creativity indesign; Materialsselec tionofmaterialsfordesigndevelopmentsin

materialtechnology, criteriaformaterialselection, materialselection interrelationshipwithprocess

selectionprocessselectioncharts.

### UNIT II

Machiningprocess:Overviewofvariousmachiningprocesses,generaldesignrulesform achining, dimensional

toleranceandsurfaceroughness, design formachining, ease of redesigning of compone ntsformachiningeasewithsuitableexamples. General designrecommendationsformachined parts

Metal casting: Appraisal of various casting processes, selection of casting processes, general design

considerationsforcasting, casting to lerances, use of solidification simulation in casting design, product design rules for sandcasting Metaljoining: Appraisal of various welding processes, factors indesign of weldments, general design guidelines, preand

posttreatmentof welds, effects of thermals tresses in weld joints, design of brazed joints

### UNIT III

Forging, design factors for forging, closed dies forging design, parting lines of die drop forging die design generaldesign recommendations. extrusion and sheet work: Design guidelines for extruded sections. metal design principlesforpunching, blanking, bending, deepdrawing, KeelerGoodmanforminglin ediagram, component design for

### blanking.

### Course Title: ADDITIVE MANUFACTURING PROCESSES Course Code: BME907

L	Т	Р	Credits
3	0	0	3

### **Total Hours-45**

### Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Understand the working principle and process parameters of AM processes
- 2. Explore the applications of AM processes in various fields
- 3. Select the suitable material and process for fabricating a given product
- 4. Apply the knowledge in Material science in Additive Manufacturing Components.

### **Course Content**

### UNIT I

Introduction to Additive Manufacturing: Introduction to AM, AM evolution, Distinction between AM & CNC machining, Steps in AM, Classification of AM processes, Advantages of AM and Types of materials for AM. Vat Photo polymerization AM Processes: Stereo lithography (SL), Materials, Process Modelling, SL resin curing process, SL scan patterns, Micro-stereo lithography, Mask Projection Processes, Two-Photon vat photo polymerization, Process Benefits and Drawbacks, Applications of Vat Photo polymerization, Material Jetting and Binder Jetting AM Processes.

### Extrusion - Based AM Processes: Fused Deposition Modelling (FDM), Principles, Materials, Process Modelling, Plotting and path control, BioExtrusion, Contour Crafting, Process Benefits and Drawbacks, Applications of Extrusion-Based Processes. Sheet Lamination AM Processes: Bonding Mechanisms, Materials, Laminated Object Manufacturing (LOM), Ultrasonic Consolidation (UC), Gluing, Thermal bonding, LOM and UC applications

### UNIT III

### 12 Hours

10 Hours

Powder Bed Fusion AM Processes: Selective laser Sintering (SLS), Materials, Powder fusion mechanism and powder handling, Process 11 Modelling, SLS Metal and ceramic part creation, Electron Beam melting (EBM), Process Benefits and Drawbacks, Applications of Powder Bed Fusion Processes.

### UNIT IV

### 13Hours

Directed Energy Deposition AM Processes: Process Description, Material Delivery, Laser Engineered Net Shaping (LENS), Direct Metal Deposition (DMD), Electron Beam Based Metal Deposition, Processing-structureproperties, relationships, Benefits and drawbacks, Applications of Directed Energy Deposition Processes. Materials science for AM - Multifunctional and graded materials in AM, Role of solidification rate, Evolution of nonequilibrium structure, microstructural studies, Structure property relationship.

### Transaction Mode

### Course Title: DIE, MOLD AND TOOL ENGINEERING Course Code: BME908

L	Т	P Credits	
3	0	0	3

### **Total Hours-45**

Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Understand of fixturing and workholding during machining processes.
- 2. Provide an understanding of the metallurgy, processing, and types of tool steels, including heat treatment.
- 3. Acquire knowledge an introduction to dies and molds for forming processes in both the liquid and solid states.
- 4. Basic understanding of the economics of tooling: break even analysis, number of mold or die cavities, comparison of production processes based on production run.

### **Course Content**

### UNIT I

### CuttingToolDesign

Fundamentals of Cutting tools design, cutting tools and their principalelements, Toolgeometry, system of nomenclatures and their interrelations, setting fort hegrinding of various basic cutting tool

(turning,drilling,milling).

### AnalysesandDesignofJigsandFixture

Principles of jig and fixture design, Dual cylinder location, diamond pinanalysis,V-block analysis, design principlesofcentralizers, variousmechanisms and design of equalizers, analysis for optimum number ofclamping forces required and calculation of theirmagnitudes,

conceptofmodularfixtures,designoffixturesforNC/CNCmachines,computer

Applicationsinfixturedesignandanalysis

### UNIT II

### Designofpresstools:

Components of die design, design of die blocks, punches and strippers, methods of holding punches, sketches of stock stops, Design procedure for progressive dies, compound dies and combination dies for press tooloperation for ging die design for drop and machine for ging parts.

Computerapplicationsinpresstool design.

### UNIT III

### Designofforgingdies:

Grain flow considerations, parting line selection, draft, design problemsinvolving ribs, bosses and fillets. Flash and flash control, determinationof number of impressions required and their sequence, design steps andanalysisofforgingdies, detailcalculations, shrinkage, cavity shapes,

heattransferconsiderations, cooling and ejection systems, automation in

forgingoperations, computer aideddesignandanalysis.

### UNIT IV

## Designofinjectionmolds

Principles of melt processing, product considerations, determination of economical number of cavities, temperature control of injection molds, calculation of mold opening force and ejection force. Detail design of coolingsystem, ejectionsystem and gating system. Moldability features, moldflow analysis

L	Т	Ρ	Credits
3	0	0	3

### **Total Hours-45**

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Understand the functioning of automobiles, maintenance and their manufacturing.
- 2. Examine the servicing of automobiles or trading/ manufacturing of auto components this helps to make skillful.
- 3. Illustrate the types of air compressors, working principle of two stroke and four stroke engines.
- 4. Differentiate the operating characteristics of common internal combustion engines.

## **Course Contents**

### **UNIT I10Hours**

### Vehicle Structure and Engines

Types of Automobiles - Vehicle Construction – Chassis – Frame and Body – Aerodynamic forces.Engine components, Materials and functions - Cooling and Lubrication systems in engines – Turbo Chargers – Engine Emission Control by three way Catalytic converter – Electronic Engine Management System.

### **UNIT II10 Hours**

### Engine Auxiliary Systems

Carburetor-working principle - Electronic fuel injection system – Mono-point and Multi -Point Injection Systems – Construction, Operation and Maintenance of Lead Acid Battery - Electrical systems – Battery generator – Starting Motor and Drives – Lighting and Ignition (Battery, Magneto Coil and Electronic Type) - Regulators-cut outs.

### UNIT III

### **10HoursTransmission Systems**

Clutch – Types and Construction – Gear Boxes, Manual and Automatic – Floor Mounted Shift Mechanism – Over Drives – Fluid flywheel - Torque converters– Propeller shaft – Slip Joint – Universal Joints – Differential and Rear Axle – Hotchkiss Drive and Torque Tube Drive – Introduction to rear wheel drive.

### UNIT IV

## Hours1.Steering, Brakesand Suspension

Wheels and Tyres – Wheel Alignment Parameters - Steering Geometry and Types of steering gear box– Power Steering – Types of Front Axle – Suspension systems – Braking Systems – Types and Construction – Diagonal Braking System – Antilock Braking System.

### 2. Alternative Energy Sources

Use of Natural Gas, LPG, Biodiesel, Alcohol and Hydrogen in Automobiles - Electric and Hybrid Vehicles, Fuel Cells – Introduction to off road vehicles.

### **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

### **Course Title: AEROSPACE ENGINEERING Course Code: BME910**

Learning Outcomes: After completion of this course, the learner will be able to:

- 1. Apply a deep working knowledge of technical fundamentals to solve engineering problems and address society's needs in aerospace and related areas for the nation and the world.
- 2. Understand technical, business, societal, and other contexts; demonstrate a commitment to ethical action; and continue to strengthen technical, professional, and personal skills.
- 3. Communicate and collaborate effectively as members of multidisciplinary teams.
- 4. Design, implementation, and operation of innovative technologies, products, processes, and systems in aerospace and related areas for the nation and the world.

### **Course Contents**

### UNIT I

History of flights; Anatomy of flight vehicles.

### UNIT II

### **Engine Auxiliary Systems**

Classification of aircraft and spacecraft; Atmosphere and flying weather; Airfoil and wing aerodynamics; Aerodynamic forces, lift anddrag, high lift devices.

## **UNIT III**

Aircraft performance-takeoff and landing, cruising, climbing, glidingand turning flights, range and endurance, ceiling, flight envelope; Principles of stability and control.

## UNIT IV

Aerospace propulsion systems; Elements of structures and materials; Airplanes ofthefuture; Hypersonic vehicles; Basics of spaceflight; Indianaerospacescenario.

### Course Title: AGRICULTURE ENGINEERING Course Code: BME911

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Differentiate primary and secondary tillage; identify tillage implements associated with either the primary or secondary tillagecategory.
- 2. Understand why a producer might do conservation vs. conventional tillage.
- 3. Describe strip tillage, ridge tillage, no-tillage, mulch tillage, and vertical tillage.
- 4. Perform all pre-inspection and operations of at least two different types of farmmachinery

### **Course Contents**

### UNIT I

Status of Farm Power in India, Sources of Farm Power , I.C. engines, workingprinciplesofICengines, comparison of two stroke and four stroke cycle engines, Study of different components of I.C. engine,

I.C.engineterminologyandsolvedproblems.

### UNIT II

### **Engine Auxiliary Systems**

Familiarizationwithdifferentsystems of

I.C.engines:Aircleaning,cooling,lubrication,fuelsupplyandhydrauliccontrolsystemofatract or,

Familiarization with Power transmission system: clutch, gearbox, differential and final drive of at ractor.

### UNIT III

Tractortypes,Costanalysisoftractorpowerandattachedimplement,Familiarization with Primary and Secondary Tillage implement, Implement forhillagriculture,implementfor Interculturaloperations.

### UNIT IV

Familiarization with sowing and planting equipment, calibration of a seed drillandsolvedexamples, Familiarization with PlantProtection equipment, Familiarization with harvesting and threshing equipment.

### **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

### Course Title: BIOMEDICAL ENGINEERING Course Code: BME306

L	Т	Р	Cr.
3	0	0	3

### **Total Hours-45**

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Gain expertise in designing and developing medical devices and instruments for diagnosis, monitoring, and treatment.
- 2. Understand the mechanics of biological systems, studying movement and forces in the context of human physiology.
- 3. Explore the selection and development of materials for implants and medical devices compatible with living tissues.
- 4. Learn about medical imaging technologies like MRI, CT, and ultrasound, used for visualization and diagnosis.

### CourseContents

### UNIT I

Introduction to Medical Instruments and Devices, Principles and Applications. Fundamentals of Anatomy and Physiology in Biomedical Engineering. Biomaterials and their Classification for Medical Applications. Medical Imaging Techniques: Xray, MRI, CT, Ultrasound, and their Principles. Basic Principles of Biomechanics in Biomedical Engineering.

### UNIT II

Biomechanics: Kinematics and Dynamics of Human Movement. Medical Electronics: Sensors, Signal Processing, and Instrumentation. Diagnostic Techniques: Electrocardiography (ECG), Electroencephalography (EEG), and Electromyography (EMG). Principles of Medical Imaging and Image Processing. Design and Evaluation of Medical Devices: Safety and Regulatory Considerations.

### UNIT III

Medical Signal Processing: Analysis and Interpretation of Physiological Signals. Biomedical Instrumentation: Measurement Techniques and Transducers. Introduction to Biomedical Sensors and Biosensors. Medical Data Acquisition and Processing. Patient Monitoring Systems and Telemedicine Applications.

### UNIT IV

Biomedical Image Analysis: Image Enhancement, Segmentation, and Feature Extraction. Digital Image Processing in Medical Imaging: Applications and Techniques. Medical Imaging Modalities: Ultrasound, MRI, PET, SPECT, and CT. Medical Image Reconstruction Techniques: Tomography and 3D Imaging. Emerging Trends in Biomedical Engineering: Wearable Health Technologies and Point-of-Care Devices.

### **10 Hours**

**10 Hours** 

### 15 Hours

### **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

- "Introduction to Biomedical Engineering" by John Enderle, Susan M. Blanchard, Joseph D. Bronzino, 2005.
- "Biomechanics: Concepts and Computation" by Cees Oomens, Marcel Brekelmans, Frank Baaijens, 2018.
- "Medical Instrumentation: Application and Design" by John G. Webster, 2009.
- "Medical Imaging Signals and Systems" by Jerry L. Prince, Jonathan Links, 2006.
- "Biomedical Signal Processing: Principles and Techniques" by Rangaraj M. Rangayyan, 2002.
- "Digital Image Processing" by Rafael C. Gonzalez, Richard E. Woods, 2008.

Course Title: FOOD TECHNOLOGY Course Code: BME913

L	Т	Р	Cr.
3	0	0	3

### **Total Hours-45**

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Apply scientific principles to analyze and understand the composition, quality, and safety of food products.
- 2. Evaluate and implement food preservation methods to extend shelf life and maintain product quality.
- 3. Demonstrate knowledge of food regulations, labeling requirements, and ethical considerations in the food industry.
- 4. Design and innovate food products, considering consumer preferences, sustainability, and technological advancements.

### CourseContents

### UNIT I

Food Chemistry: Macronutrients and Micronutrients, Chemical Reactions in Food Processing, Enzymes in Food Systems. Food Microbiology: Microbial Spoilage, Pathogens, Microbial Growth Factors. Food Preservation Techniques: Heat Processing, Refrigeration, Freezing, Drying, Fermentation.

### UNIT II

Food Engineering Principles: Heat and Mass Transfer in Food Processing, Fluid Flow, Unit Operations in Food Industry. Food Processing Technologies: Thermal Processing, Mixing, Separation, Size Reduction, Extrusion. Food Packaging: Types of Packaging Materials, Packaging Design, Shelf-Life Extension

### UNIT III

Food Quality and Safety: Quality Parameters, Sensory Evaluation, Quality Control Methods. Food Additives: Types, Functions, Regulations. Food Analysis Techniques: Proximate Analysis, Instrumental Methods for Food Analysis, Chromatography. Food Laws and Regulations: International and National Food Standards and Regulations.

### UNIT IV

Food Product Development: Formulation, Sensory Analysis, Nutritional Labeling. Food Biotechnology: Applications in Food Processing, Genetic Modification. Food Supply Chain Management: Procurement, Storage, Distribution, Logistics. Emerging Trends in Food Technology: Functional Foods, Sustainable Food Processing.

### 12 Hours

**10 Hours** 

12 Hours

### **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

- "Food Processing Technology: Principles and Practice" by P.J. Fellows, 2009.
- "Food Science" by Norman N. Potter and Joseph H. Hotchkiss, 1999.
- "Introduction to Food Engineering" by R. Paul Singh and Dennis R. Heldman, 1984.
- "Food Microbiology: An Introduction" by Thomas J. Montville, Karl R. Matthews, and Yvonne Schäfer, 2020.
- "Food Packaging: Principles and Practice" by Gordon L. Robertson, 2016.

L	Т	Р	Cr.
3	0	0	3

### **Total Hours-45**

### **Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Acquire a solid understanding of various marine propulsion systems, including engines and propellers, enabling the analysis and optimization of ship propulsion performance.
- 2. Expertise in international maritime regulations and safety standards, allowing the implementation of safety measures, adherence to regulations, and effective management of shipboard safety.
- 3. Develop the skills to comprehend, operate, and maintain marine auxiliary systems such as steering gear, bow thrusters, pumps, and electrical systems, ensuring the efficient operation of shipboard equipment

### CourseContents

### UNIT I

Marine Propulsion Systems: Types and Characteristics of Marine Engines, Propeller Types and Performance, Engine Performance Analysis. Marine Power Generation: Shipboard Power Plants, Diesel Generator Operation, Power Distribution.

### UNIT II

Marine Heat Transfer: Heat Exchangers, Cooling Systems, Thermal Efficiency Enhancement. Ship Stability: Centre of Gravity, Centre of Buoyancy, Stability Criteria. Ship Construction: Shipbuilding Materials, Structural Components, Welding Techniques.

### UNIT III

Marine Auxiliary Systems: Steering Gear, Bow Thrusters, Marine Pumps, Compressed Air Systems. Ship Hydrodynamics: Resistance and Propulsion, Hydrodynamic Performance Analysis. Marine Electrical Systems: Power Generation and Distribution, Electrical Machinery.

### UNIT IV

Marine Safety and Regulations: International Maritime Organization (IMO) Regulations, SOLAS Convention, Shipboard Safety. Marine Automation and Control: Engine Control Systems, Alarm and Monitoring Systems. Marine Pollution Prevention: Environmental Regulations, Ballast Water Management.

### **Transaction Mode**

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

### **10 Hours**

**15 Hours** 

### 10 Hours

### **Suggested Readings:**

- "Marine Engineering: Principles and Practice" by Anthony F. Molland, 2011.
- "Introduction to Marine Engineering" by D.A. Taylor, 2014.
- "Reeds Vol 12 Motor Engineering Knowledge for Marine Engineers" by Paul Anthony Russell, 2012.
- "Marine Diesel Engines: Maintenance and Repair Manual" by Jean-Luc Pallas, 2006.

\*\*\*\*\*

• "Ship Construction" by David J. Eyres, 2006.

**Learning Outcomes:** After completion of this course, the learner will be able to:

- 1. Acquire a solid understanding of various marine propulsion systems, including engines and propellers, enabling the analysis and optimization of ship propulsion performance.
- 2. Gain expertise in international maritime regulations and safety standards, allowing the implementation of safety measures, adherence to regulations, and effective management of shipboard safety.
- 3. Develop the skills to comprehend, operate, and maintain marine auxiliary systems such as steering gear, bow thrusters, pumps, and electrical systems, ensuring the efficient operation of shipboard equipment

### CourseContents

### UNIT I

Nuclear Physics Fundamentals - Particle structure, nuclear forces, and radioactive decay. Nuclear Reactions and Interactions - Cross sections, reaction mechanisms, and neutron interactions with matter. Nuclear Energy - Fission and fusion processes, energy release, and fuel cycles. Radiation Detection and Measurement - Principles of radiation detection, detectors, and dosimetry. Nuclear Reactor Types - Overview of reactor types, their operation, and safety considerations

### UNIT II

Nuclear Reactor Kinetics - Reactor dynamics, reactivity, and control mechanisms. Neutron Transport Theory - Neutron diffusion equation, boundary conditions, and solutions. Neutron Moderation and Absorption -Moderating materials, resonance absorption, and thermalization. Reactor Safety Analysis - Safety systems, accident scenarios, and containment strategies. Reactor Shielding - Radiation shielding materials, calculations, and design considerations.

### UNIT III

Nuclear Fuel Cycle - Uranium enrichment, fuel fabrication, and spent fuel management. Radioactive Waste Management - Classification of waste, disposal methods, and environmental impact. Nuclear Instrumentation and Control - Control systems, instrumentation, and reactor operation. Nuclear

### 15 Hours

### **10 Hours**

Thermal Hydraulics - Heat transfer, coolant flow, and safety analysis in reactor systems. Radiation Protection and Shielding - Design of shielding, radiation exposure limits, and occupational safety.

### UNIT IV

### 10 Hours

Nuclear Power Economics - Cost analysis, economics of nuclear power plants, and public perception. Nuclear Regulations and Licensing - Regulatory framework, licensing procedures, and safety regulations. Emerging Nuclear Technologies - Advanced reactor designs, fast reactors, and thorium-based reactors. Nuclear Non-Proliferation - Treaty obligations, safeguards, and preventing nuclear weapons proliferation. Fusion Energy - Basic principles of fusion, research reactors, and potential for commercial fusion energy production.

### Transaction Mode

Lecture, Seminar, e-Team Teaching, e-Tutoring, Dialogue, Peer Group Discussion, Mobile Teaching, Self-Learning, Collaborative Learning and Cooperative Learning.

- "Introduction to Nuclear Engineering" by John R. Lamarsh and Anthony J. Baratta, 2001.
- "Nuclear Reactor Physics, Second Edition" by Weston M. Stacey, 2007.
- "The Physics of Nuclear Reactors" by Serge Marguet, 2011.
- "Introduction to Nuclear Engineering, Third Edition" by John R. Lamarsh and Anthony J. Baratta, 2001.
- "Fundamentals of Nuclear Reactor Physics" by Elmer E. Lewis, 2008.
